CRS Report for Congress

Prepared for Members and Committees of Congress

Summary

Increasingly strict sanctions on Iran—which target primarily Iran’s key energy sector as well as its ability to access the international financial system—have harmed Iran’s economy, but not to the point where key Iran leaders have been compelled to reach a compromise with the international community on Iran’s nuclear program. And, the strategic effects of sanctions might be abating as Iran adjusts to them economically and advertises the adverse humanitarian effects.

- Oil exports fund nearly half of Iran’s government expenditures, and Iran’s oil exports have declined to about 1.25 million barrels—a halving from the 2.5 million barrels per day Iran exported during 2011. The causes of the drop have been a European Union embargo on purchases of Iranian crude oil that took full effect on July 1, 2012, and decisions by several other Iranian oil customers to substantially reduce purchases of Iranian oil. To date, 20 of Iran’s oil customers have reduced Iranian oil imports sufficiently to achieve an exemption from U.S. sanctions under the FY2012 National Defense Authorization Act (P.L. 112-81).
- The loss of revenues from oil, coupled with the cut-off of Iran from the international banking system, has caused a collapse in the value of Iran’s currency, the rial. That collapse has increased inflation to over 50%, according to many experts. Iran’s economy shrank slightly from 2012-2013 and will likely shrink again during 2013. There have also been unintended consequences including a shortage of some advanced Western-made medicines.
- However, Iran has found ways to mitigate the economic and political effects of sanctions. Government-linked entities are creating front companies and making increased use of barter trade. Iranian traders are using informal banking exchange mechanisms and, benefitting from the fall in the value of Iran’s currency, sharply increasing non-oil exports such as agricultural goods, minerals, and industrial goods. Affluent Iranians are investing in hard assets such as real estate.

Although sanctions have not compelled Iran to change its position on its nuclear program, sanctions may be slowing Iran’s nuclear and missile programs by hampering Iran’s ability to obtain needed technology from foreign sources. However, Department of Defense and other assessments indicate that sanctions have not stopped Iran from developing some new weaponry indigenously. Iran is also judged not complying with U.N. requirements that it halt any weapons shipments outside its borders, particularly by providing arms to the embattled Assad government in Syria. And, sanctions do not appear to have altered Iran’s repression of dissent or its efforts to monitor public use of the Internet.

Some in Congress believe that economic pressure on Iran needs to increase. In the 112th Congress, the Iran Threat Reduction and Syria Human Rights Act of 2012 (P.L. 112-158) made sanctionable the shipping of Iranian crude oil, and it enhanced human rights-related provisions of previous Iran-related laws. A provision of the FY2013 National Defense Authorization Act (P.L. 112-239) sanctions transactions with several key sectors of Iran’s economy. A bill in the 113th Congress, H.R. 850, ordered to be reported out of the House Foreign Affairs Committee on May 22, 2013, would authorize, but not mandate, U.S. sanctions against nearly all trade with Iran and it would sanction banks that exchange Iran’s hard currency abroad. For a broader analysis of policy on Iran, see CRS Report RL32048, *Iran: U.S. Concerns and Policy Responses*, by Kenneth Katzman.

---------------------------------	----

Overview and Objectives

U.S. sanctions have been a major feature of U.S. Iran policy since Iran's 1979 Islamic revolution, but U.N. and worldwide bilateral sanctions on Iran are a relatively recent (post-2006) development. Many of the U.S. sanctions reinforce U.N. and multilateral sanctions put in place in recent years by European and some Asian countries. Successive Administrations have sought to ensure that U.S. sanctions do not hamper cooperation with key international partners whose support is needed to isolate Iran. Almost all U.S. sanctions provisions provide the President with waiver authority; those provisions that do not provide waiver authority are noted in this paper. Some U.S. sanctions have been enacted into law, some have been imposed by executive order (under the International Emergency Economic Powers Act, IEEPA, and other authorities), and others based on administration determinations authorized by law (for example sanctions triggered by Iran's designation as a state sponsor of terrorism).

The objectives of U.S. sanctions have evolved over time. In the mid-1980s, U.S. sanctions were intended to try to compel Iran to cease supporting acts of terrorism and to limit Iran's strategic power in the Middle East more generally. Since the mid-1990s, U.S. sanctions have focused increasingly on persuading or compelling Iran to limit the scope of its nuclear program to ensure purely civilian use. The international community has joined U.S. sanctions in recent years in pursuit of that goal.

This report analyzes U.S. and international sanctions against Iran and, in so doing, provides examples, based on a wide range of open source reporting, of companies and countries that conduct business with Iran. CRS has no way to independently corroborate any of the reporting on which these examples are based and no mandate to assess whether any entity is complying with U.S. or international sanctions against Iran.

Implementation of some of the sanctions is subject to interpretation. On November 13, 2012, the Administration published in the Federal Register (Volume 77, Number 219) "Policy Guidance" explaining how it intends to implement many of the sanctions discussed below.¹ The guidance also sets out examples of specific products and chemicals that are included in the definitions of such terms as "petroleum," "petroleum products," and "petrochemical products" that are used in the laws and executive orders discussed below.

Energy Sector Sanctions: The Iran Sanctions Act (ISA) and Related Laws and Executive Orders

Since 1996, Congress and successive Administrations have put in place steps to try to force foreign energy firms to choose between participating in the U.S. market, or continuing to operate in or conduct various energy-related transactions with Iran.

¹ http://www.regulations.gov/#!documentDetail;D=DOS_FRDOC_0001-2175.

The Iran Sanctions Act and Amendments

The Iran Sanctions Act (ISA) is the core of the energy-related U.S. sanctions. It took advantage of Iran's opening of the sector to foreign investment in late 1995. To accommodate its insistence on retaining control of its national resources, Iran used a "buy-back" investment program in which foreign firms gradually recoup their investments as oil and gas is discovered and then produced. With input from the Administration, on September 8, 1995, Senator Alfonse D'Amato introduced the "Iran Foreign Oil Sanctions Act" to sanction foreign firms' exports to Iran of energy technology. A revised version instead sanctioning *investment* in Iran's energy sector, and also applying all provisions to Libya passed the Senate. The Iran and Libya Sanctions Act (ILSA) was signed on August 5, 1996 (H.R. 3107, P.L. 104-172). It was later retitled the Iran Sanctions Act after it terminated with respect to Libya in 2006.

Since its enactment in 1996, ISA has attracted substantial attention because it is an "extra-territorial sanction"—it authorizes U.S. penalties against foreign firms, many of which are incorporated in countries that are U.S. allies. American firms are separately restricted from trading with or investing in Iran under separate U.S. executive orders, as discussed below. Its application has been further expanded by several laws enacted since 2010, as discussed below. In addition, several executive orders have been issued that authorize the application of ISA sanctions to specified violators, *but the executive orders do not amend ISA itself*. (An executive order cannot amend a law passed by Congress and signed by the President.)

The intent of ISA was to deny Iran the resources to further its nuclear program and to support terrorist organizations such as Hizbollah, Hamas, and Palestine Islamic Jihad. Iran's petroleum sector generates about 20% of Iran's GDP (which is about \$870 billion), about 80% of its foreign exchange earnings, and about 50% of its government revenue for 2012. Iran's oil sector is as old as the petroleum industry itself (early 20th century), and Iran's onshore oil fields are past peak production and in need of substantial investment. Iran has 136.3 billion barrels of proven oil reserves, the third largest after Saudi Arabia and Canada. With the exception of relatively small swap and barter arrangements with neighboring countries, virtually all of Iran's oil exports flow through the Strait of Hormuz, which carries about one-third of all internationally traded oil.

Iran's large natural gas resources (940 trillion cubic feet, exceeded only by Russia) were virtually undeveloped when ISA was first enacted. Its small gas exports are mainly to Armenia and Turkey; most of its gas is injected into its oil fields to boost their production.

Key "Triggers"

ISA consists of a number of "triggers"—transactions with Iran that would be considered violations of ISA and could cause a firm or entity to be sanctioned under ISA's provisions. When triggered, ISA provides a number of different sanctions that the President could impose that would harm a foreign firm's business opportunities in the United States. ISA primarily targets foreign firms, because American firms are already prohibited from investing in Iran under the 1995 trade and investment ban discussed below. It does not compel any foreign government to act against one of its firms.

The original version of ISA requires the President to sanction companies (entities, persons) that make an “investment”² of more than \$20 million³ in one year in Iran’s energy sector.⁴ The definition of “investment” in ISA (§14 (9)) includes not only equity and royalty arrangements (including additions to existing investment, as added by P.L. 107-24) but any contract that includes “responsibility for the development of petroleum resources” of Iran. The Comprehensive Iran Sanctions, Accountability, and Divestment Act of 2010 (CISADA, P.L. 111-195) did not alter this trigger but it did amend the definition of investment to explicitly include pipelines to or through Iran and contracts to lead the construction, upgrading, or expansions of energy projects.

Trigger Added: Sales of Weapons of Mass Destruction and Advanced Conventional Weapons-Related Technology

The Iran Freedom Support Act (P.L. 109-293, signed September 30, 2006) amended ISA—by adding Section 5(b)(1)—to add a trigger: that ISA sanctions should be imposed on firms or persons who sell to Iran (or to persons who the exporter knows will re-export to Iran) technology useful for weapons of mass destruction (WMD) or “destabilizing numbers and types” of advanced conventional weapons.

No sanctions have been imposed on any entity under Section 5(b)(1).

CISADA Trigger Added: Sales of Gasoline and Related Equipment and Services

The originally enacted version of ISA did not make sanctionable sales to Iran of gasoline or of equipment with which Iran can itself build or expand its refineries or import gasoline.⁵ And it did not clearly make sanctionable Iranian investments in oil refineries abroad. Iran’s dependency on import for 40% of its gasoline needs caused some Members of Congress to argue for sanctions on the sale to Iran of gasoline and refinery equipment. A bill in the 110th Congress to sanction gasoline sales (H.R. 2880) was not enacted. In the 111th Congress, the FY2010 Energy and Water Appropriation (P.L. 111-85) prohibited the use of U.S. funds to fill the Strategic Petroleum Reserve with products from firms that sell over \$1 million worth of gasoline to Iran. The FY2010 Consolidated Appropriations Act (P.L. 111-117) denied Ex-Im Bank credits to any firm that sold gasoline and related equipment and services to Iran. These initiatives did prompt a decision in December 2008 by Reliance Industries Ltd. of India to at least temporarily cease new sales of

² As amended by CISADA (P.L. 111-195), these definitions include pipelines to or through Iran, as well as contracts to lead the construction, upgrading, or expansions of energy projects. CISADA also changes the definition of investment to eliminate the exemption from sanctions for sales of energy-related equipment to Iran, if such sales are structured as investments or ongoing profit-earning ventures.

³ Under §4(d) of the original act, for Iran, the threshold dropped to \$20 million, from \$40 million, one year after enactment, when U.S. allies did not join a multilateral sanctions regime against Iran. However, P.L. 111-195 explicitly sets the threshold investment level at \$20 million. For Libya, the threshold was \$40 million, and sanctionable activity included export to Libya of technology banned by Pan Am 103-related Security Council Resolutions 748 (March 31, 1992) and 883 (November 11, 1993).

⁴ The original ISA definition of energy sector included oil and natural gas, and CISADA added to that definition: liquefied natural gas (LNG), oil or LNG tankers, and products to make or transport pipelines that transport oil or LNG.

⁵ Taking responsibility for constructing oil refineries or petrochemical plants in Iran (for example managing or playing a major role in the construction contracts) did constitute sanctionable projects under the original version of ISA because ISA’s definition of investment includes “responsibility for the development of petroleum resources located in Iran.”

Table 4 provides some information on openly announced contracts to upgrade or refurbish Iranian oil refineries.

refined gasoline to Iran. (The Ex-Im Bank, in August 2008, had extended a total of \$900 million in financing guarantees to Reliance to help it expand.)

CISADA Enactment and Provisions. Later in the 111th Congress, H.R. 2194, (Iran Refined Petroleum Sanctions Act) and S. 2799 (“Dodd-Shelby Comprehensive Iran Sanctions, Accountability, and Divestment Act”), passed their respective chambers. The conference report on H.R. 2194 added several provisions beyond amending ISA—provisions affecting U.S.-Iran trade and other issues. The President signed the final version—the Comprehensive Iran Sanctions, Accountability, and Divestment Act of 2010 (CISADA) on July 1, 2010 (P.L. 111-195), which amended ISA by making sanctionable:

- Sales to Iran of over \$1 million worth (or \$5 million in a one year period) of gasoline and related aviation and other fuels. (Fuel oil, a petroleum by-product which is reportedly being sold to Iran by exporters in the Kurdish region of Iraq, is not included in the definition of refined petroleum.)
- Sales to Iran of equipment or services (same dollar threshold as above) which would help Iran make or import gasoline. Examples of such sales include equipment and services that Iran can use to construct or maintain its oil refineries, or provision of services such as gasoline shipping or related port operations.

Trigger Added by Executive Order 13590 (November 21, 2011) and Iran Threat Reduction Act (P.L. 112-158): Sanctioning Sales of Energy Sector Equipment, Services, and Petrochemicals

On November 21, 2011, the Administration issued Executive Order 13590, sanctioning sales to Iran of equipment it can use in its energy sector. *The executive order did not—and cannot—amend ISA itself.* The order was later codified in Section 201 of the Iran Threat Reduction and Syria Human Rights Act of 2012 (P.L. 112-158), which added Section 5(a)(5 and 6) to ISA, sanctioning firms that

- Provide to Iran \$1 million or more (or \$5 million in a one year period) worth of goods or services that Iran could use to maintain or enhance its oil and gas sector. This made sanctionable, for example, transactions with Iran by global oil services firms and the sale to Iran of energy industry gear such as drills, pumps, vacuums, oil rigs, and the like.
- Provide to Iran \$250,000 (or \$1 million in a one year period) worth of goods or services that Iran could use to maintain or expand its production of petrochemical products.⁶

⁶ A definition of chemicals and products considered “petrochemical products” is found in a Policy Guidance statement. See, Federal Register, November 13, 2012. http://www.regulations.gov/#!documentDetail;D=DOS_FRDOC_0001-2175

Trigger Added by Executive Order 13622 (July 30, 2012): Purchasing of Iranian Crude Oil and Petrochemical Products and Provision of Precious Metals

On July 30, 2012, President Obama issued Executive Order 13622. *A law cannot be amended by Executive Order and E.O. 13622 does not amend ISA.* E.O 13622 does apply virtually all of the same sanctions as ISA—as well as restrictions on foreign banks (see below)—to entities that the President determines have:

- purchased oil or other petroleum products from Iran,⁷
- conducted transactions with the National Iranian Oil Company (NIOC) or Naftiran Intertrade Company (NICO), or
- purchased petrochemical products from Iran.

Sanctions do not apply if the parent country of the entity has received an exemption under Section 1245 of P.L. 112-81—an exemption earned for “significantly reducing” oil purchases from Iran. (See below for more information on the Section 1245 sanctions and exemption process.)

Section 5 of E.O. 13622 also blocks U.S.-based property of individuals or firms determined to have provided financial support to NIOC, NICO, or the Central Bank of Iran, *or to have helped Iran purchase U.S. bank notes or precious metals.* The section therefore affects foreign firms that transfer gold or other precious metals to Iran in exchange for oil or any other product.

Triggers Added by the Iran Threat Reduction and Syria Act (P.L. 112-158)

Section 201 of the Iran Threat Reduction and Syria Human Rights Act (H.R. 1905, P.L. 112-158, signed August 10, 2012) amends ISA by adding several sanctions triggers, including:

- Ownership of a vessel that is used to transport Iranian crude oil. This sanction does not apply in cases of transporting oil to countries that have received exemptions under P.L. 112-81, discussed below. The section also *authorizes but does not require* the President, subject to regulations, to prohibit a ship from putting to port in the United States for two years, if it is owned by a person sanctioned under this provision. (*Adds Section 5(a)(7) to ISA.*)
- Participation in a joint oil and gas development venture with Iran, outside Iran, if that venture was established after January 1, 2002. The effective date exempts energy ventures in the Caspian Sea, such as the Shah Deniz oil field there. (*Adds Section 5(a)(4) to ISA.*)
- Participation in a joint venture with Iran relating to the mining, production, or transportation of uranium. (*Adds Section 5(b)(2).*)
- Selling threshold amounts of energy industry equipment, including for the production of petrochemicals. (*Adds Section 5(a)(5 and 6) to ISA.*) *This provision essentially places Executive Order 13590 into law.*

⁷ A definition of what chemicals and products are considered “petroleum products” for the purposes of the order are in the policy guidance issued November 13, 2012. http://www.regulations.gov/#!documentDetail;D=DOS_FRDOC_0001-2175.

Separate provisions of this law (Sections 212, 213, and 302) *do not specifically amend ISA*, but require the application of five out of 12 ISA sanctions on any company:

- that provides insurance or re-insurance for the National Iranian Oil Company (NIOC) or the National Iranian Tanker Company (NITC);
- that purchases or facilitates the issuance of sovereign debt of the government of Iran, including Iranian government bonds; or
- that engages in a “significant transaction” with the Islamic Revolutionary Guard Corps (IRGC) or any of its officials, agents, or affiliates.

Mandate and Time Frame to Investigate ISA Violations

In the original version of ISA, there was no firm requirement, and no time limit, for the Administration to investigate potential violations and determine that a firm has violated ISA’s provisions. CISADA, Section 102(g)(5), altered that by mandating that the Administration begin an investigation of potential ISA violations when there is “credible information” about a potential violation. The same section made mandatory the 180-day time limit for a determination of violation. Under Section 102(h)(5), the mandate to investigate gasoline related sales can be delayed an additional 180 days if an Administration report, submitted to Congress by June 1, 2011, asserts that its policies have produced a significant result in sales of gasoline to Iran. (No such report was submitted.) Earlier, P.L. 109-293, the “Iran Freedom Support Act” (signed September 30, 2006) amended ISA by calling for, *but not requiring*, a 180-day time limit for a violation determination (there is no time limit in the original law).⁸

A subsequent law, the Iran Threat Reduction and Syria Human Rights Act (P.L. 112-158)) contains a provision to define “credible information” to begin an investigation of a violation. The law defines credible information to include a corporate announcement or corporate filing to its shareholders that it has undertaken transactions with Iran that are potentially sanctionable under ISA. It also says the President *may* (not mandatory) use as credible information reports from the Government Accountability and the Congressional Research Service.

Oversight Mechanisms: Reports Required

The Iran Threat Reduction and Syria Human Rights Act (P.L. 112-158) sets up several mechanisms for Congress to oversee whether the Administration is investigating ISA violations. Section 223 requires a Government Accountability Office report, within 120 days of enactment, and another such report a year later, on companies that have undertaken specified activities with Iran that might constitute violations of ISA. Section 224 amends a reporting requirement in Section 110(b) of CISADA by requiring an Administration report every 180 days on investment in Iran’s energy sector, joint ventures with Iran, and estimates of Iran’s imports and exports of petroleum products. *The GAO reports have been issued; there is no information available on whether the required Administration reports have been issued as well.*

⁸ Other ISA amendments under that law included recommending against U.S. nuclear agreements with countries that supply nuclear technology to Iran and expanding provisions of the USA Patriot Act (P.L. 107-56) to curb money-laundering for use to further WMD programs.

Available Sanctions Under ISA

Once a firm is determined to be a violator, the original version of ISA required the imposition of *two* of a menu of six sanctions on that firm. CISADA added three new possible sanctions and required the imposition of at least three out of the nine against violators. H.R. 1905 amends ISA by adding three available sanctions and requiring imposition on *5 out of the 12* available sanctions. Executive Order 13590, and the July 30, 2012, executive order, discussed above, provide for exactly the same penalties as those in ISA. The 12 available sanctions against the sanctioned entity, from which the Secretary of State or the Treasury can select at least 5 (§6), include the following:

1. denial of Export-Import Bank loans, credits, or credit guarantees for U.S. exports to the sanctioned entity (original ISA);
2. denial of licenses for the U.S. export of military or militarily useful technology to the entity (original ISA);
3. denial of U.S. bank loans exceeding \$10 million in one year to the entity (original ISA);
4. if the entity is a financial institution, a prohibition on its service as a primary dealer in U.S. government bonds; and/or a prohibition on its serving as a repository for U.S. government funds (each counts as one sanction) (original ISA);
5. prohibition on U.S. government procurement from the entity (original ISA);
6. prohibitions in transactions in foreign exchange by the entity (added by CISADA);
7. prohibition on any credit or payments between the entity and any U.S. financial institution (added by CISADA);
8. prohibition of the sanctioned entity from acquiring, holding, using, or trading any U.S.-based property which the sanctioned entity has a (financial) interest in (added by CISADA);
9. restriction on imports from the sanctioned entity, in accordance with the International Emergency Economic Powers Act (IEEPA, 50 U.S.C. 1701) (original ISA);
10. a ban on a U.S. person from investing in or purchasing significant amounts of equity or debt instruments of a sanctioned person (added by Iran Threat Reduction and Syria Human Rights Act, P.L. 112-158);
11. exclusion from the United States of corporate officers or controlling shareholders of a sanctioned firm (added by P.L. 112-158); and
12. imposition of any of the ISA sanctions on principal offices of a sanctioned firm (added by P.L. 112-158).

Mandatory ISA Sanction: Prohibition on Contracts with the U.S. Government

There is an additional *mandatory* sanction under ISA. CISADA (§102(b)) added a requirement in ISA that companies, as a condition of obtaining a U.S. government contract, certify to the

relevant U.S. government agency, that the firm—and any companies it owns or controls—are not violating ISA. Regulations to implement this requirement were issued on September 29, 2010.

A provision added by Section 311 of the Iran Threat Reduction Act also requires a certification by the contractor that it is not knowingly engaging in a significant transaction with Iran’s Islamic Revolutionary Guard Corps (IRGC), or any of its agents or affiliates that have been sanctioned under several executive orders discussed below. A contract may be terminated if it is determined that the company’s certification of compliance was false.

Implementation. A GAO report to Congress of February 25, 2013, found that one foreign firm that is active in Iran’s energy sector, Daelim of South Korea, had received a U.S. government contract (\$1.5 million to build housing at a military base in South Korea) during June 2011-December 2012.⁹ Daelim has not been sanctioned under ISA or barred from receiving U.S. contracts. Further revisions of the Federal Acquisition Regulation were made to accommodate the certification provision required by Section 311.

Waivers, Exemptions, and Termination Authority

The President had the authority under the original version of ISA to waive sanctions if he certifies that doing so is *important* to the U.S. national interest (§9(c)). CISADA (§102(c)) changed the 9(c) ISA waiver standard to “*necessary*” to the national interest, and the Iran Threat Reduction Act modified the standard further to “*essential to the national security interests*” of the United States. For sanctionable transactions involving WMD equipment, the waiver standard, as modified by the Iran Threat Reduction Act, is “*vital to the national security interests of the United States.*”

Under the original version of ISA, there was also waiver authority (§4(c)) if the parent country of the violating firm joined a sanctions regime against Iran. This waiver provision was changed by the Iran Freedom Support Act (P.L. 109-293) to allow for a waiver determination based on U.S. vital national security interests. The Section 4(c) waiver was altered again, by CISADA, to provide for a six month (renewable) waiver if doing so is “*vital to the national interest,*” and if the parent country of the violating entity is “*closely cooperating*” with U.S. efforts against Iran’s WMD and advanced conventional weapons program. The criteria of “*closely cooperating*” is defined in the conference report as implementing all U.N. sanctions against Iran. It could be argued that using a Section 4 waiver, rather than a Section 9 waiver, would support U.S. diplomacy with the parent country of the offending entity.

ISA (§5(f)) also contains several exceptions such that the President is not required to impose sanctions that prevent procurement of defense articles and services under existing contracts, in cases where a firm is the sole source supplier of a particular defense article or service. The President also is not required to prevent procurement of essential spare parts or component parts.

“Special Rule” Exempting Firms That End Their Business with Iran

Under a provision added by CISADA (§102(g)(5)), ISA provides a means—a so-called “special rule”—for firms to avoid ISA sanctions by pledging to verifiably end their business with Iran and

⁹ GAO-13-344R Iran.

to forgo any sanctionable business with Iran in the future. Under the special rule, the Administration is not required to make a determination of sanctionability against a firm that makes such pledges. The special rule has been invoked on several occasions, as discussed below. However, there is some imprecision in the time frame under which countries can wind down their Iran business, and some firms could yet be working in Iran for several more years under their pledges. Energy firms insist they needed time to wind down their investments in Iran because, under the buy-back program used by Iran, the energy firms are paid back their investment over time, making it highly costly for them to suddenly end operations in Iran.

Termination Requirements

In its entirety, ISA application to Iran would terminate if the Administration determines that Iran has ceased its efforts to acquire WMD; is removed from the U.S. list of state sponsors of terrorism; *and* no longer “poses a significant threat” to U.S. national security and U.S. allies.¹⁰ The amendments to ISA made by CISADA (sanctions for selling gasoline and related equipment) would terminate if the first two criteria are met. This termination provision, and the sunset provisions discussed below, *do not apply to those laws that apply ISA sanctions without specifically amending ISA.*

Sunset Provisions

Without such determinations, ISA was to sunset on August 5, 2001, in a climate of lessening tensions with Iran (and Libya) during the presidency in Iran of moderate Mohammad Khatemi. However, some maintained that Iran would view its expiration as a concession, and renewal legislation was enacted (P.L. 107-24, August 3, 2001). This law required an Administration report on ISA’s effectiveness within 24 to 30 months of enactment; that report was submitted to Congress in January 2004 and did not recommend that ISA be repealed. The ISA sunset was subsequently extended to December 31, 2011 (by P.L. 109-293). The current sunset—December 31, 2016—was established by CISADA.

Clarification of Responsibilities: Executive Order 13574.

On May 23, 2011, President Obama issued Executive Order 13574 clarifying that it is the responsibility of the Treasury Department to implement those ISA sanctions that involve the financial sector, including bans on loans, credits, and foreign exchange for, or imports from the sanctioned entity, as well as blockage of property of the sanctioned entity (if these sanctions are selected by the Secretary of State, who makes the decision which penalties to impose on sanctioned entities).

Interpretations and Administration of ISA and Related Laws

The sections below analyze how ISA, as amended by related laws, have been interpreted and implemented through real-world cases and examples.

¹⁰ This latter termination requirement added by P.L. 109-293. This law also removed Libya from the act, although application to Libya effectively terminated when the President determined on April 23, 2004, that Libya had fulfilled the requirements of all U.N. resolutions on Pan Am 103.

Application to Energy Pipelines

ISA's definition of sanctionable "investment" has been consistently interpreted by successive administrations to include construction of energy pipelines to or through Iran. Such pipelines are deemed to help Iran develop its petroleum (oil and natural gas) sector. This interpretation was reinforced by amendments to ISA in CISADA, which specifically included in the definition of petroleum resources "products used to construct or maintain pipelines used to transport oil or liquefied natural gas." In March 2012, then Secretary of State Clinton made clear that the Obama Administration interprets the provision to be applicable from the beginning of pipeline construction, and not from the start of oil or gas flow through a finished project.¹¹

Implementation. No gas pipelines built linking Iran to neighboring countries have been sanctioned under ISA. The specific projects, such as those linking Iran and Turkey, and Iran and Pakistan (under construction) are discussed in the international compliance section below.

Application to Crude Oil Purchases

The original version of ISA did not make sanctionable purchases of oil from Iran. Executive Order 13622 and P.L. 112-158 essentially render purchasing Iranian oil sanctionable—if the parent country of the energy buyer or shipper has not received a sanctions exemption under P.L. 112-81, which is discussed below. New customers for Iranian oil are automatically sanctionable under the order and P.L. 112-81 because it is not possible for any new purchaser to receive an exemption under P.L. 112-81. Only customers that were buying Iranian oil prior to the effective date of the order or of P.L. 112-81 are eligible for the exemption.

Application to Natural Gas Purchases from Iran

The FY2013 National Defense Authorization Act (P.L. 112-239) bars dealings with Iran's energy sector broadly—but *specifically excludes from sanctionability purchases of natural gas from Iran*. Purchases of Iranian gas are distinguishable from the *construction of natural gas pipelines* involving Iran which, as discussed above, does constitute potentially sanctionable activity.

Application to Liquefied Natural Gas Development

The original version of ISA did not apply to the development by Iran of a liquefied natural gas (LNG) export capability. Iran has no LNG export terminals, in part because the technology for such terminals is patented by U.S. firms and unavailable for sale to Iran. However, CISADA specifically includes LNG in the definition of petroleum resources and therefore made LNG investment in Iran—or supply of LNG tankers or pipelines to Iran—sanctionable.

Application to Financing but Not Official Credit Guarantee Agencies

The definitions of investment and other provisions of ISA make clear that financing for investment in Iran's energy sector, or for sales of gasoline and refinery-related equipment and services, constitute sanctionable activity. Therefore, banks and other financial institutions that

¹¹ <http://dawn.com/2012/03/01/tough-us-warning-on-iran-gas-pipeline/>.

assist energy investment and refining and gasoline procurement activities could be sanctioned under ISA.

However, these definitions—including those in Executive Order 13622 and in P.L. 112-158—are not interpreted to apply to official credit guarantee agencies—such as France’s COFACE and Germany’s Hermes. These credit guarantee agencies are arms of their parent governments, and ISA does not provide for sanctioning governments or their agencies. Early versions of CISADA would have made these entities sanctionable but this was not included in the final law, out of concern for alienating U.S. allies.

Application to Iranian Energy Institutions/NIOC and NITC

As noted above, provisions of P.L. 112-158 and Executive Order 13622—*although they do not amend ISA*—apply ISA sanctions to dealings with the National Iranian Oil Company (NIOC), which is supervised by the Oil Ministry, the National Iranian Tanker Company (NITC), and a previously sanctioned firm, Naftiran Intertrade Company (NICO), which is a subsidiary of NIOC.

Under Section 302 of the Iran Threat Reduction and Syria Human Rights Act (P.L. 112-158), any person who engages in a significant transaction with NIOC and NITC is subject to the imposition of 5 out of 12 ISA sanctions. Section 312 of that law required an Administration determination, within 45 days of enactment (by September 24, 2012) whether NIOC and NITC are IRGC agents or affiliates. If such a determination is made, financial transactions with NIOC and NITC would be sanctionable under CISADA (prohibition on opening U.S.-based accounts).

Implementation. On September 24, 2012, the Department of the Treasury informed Congress that it had determined that NIOC and NITC are agents or affiliates of the IRGC. As noted below, on November 8, 2012, the Treasury Department named NIOC as a proliferation entity under Executive Order 13382. In accordance with Section 104 of CISADA, that designation bars any foreign bank determined to have dealt directly with NIOC (including with a NIOC bank account in a foreign country) from opening a U.S.-based account.

Some major components of NIOC have not been sanctioned, including

- the Iranian Offshore Oil Company;
- the National Iranian Gas Export Co.; and
- Petroleum Engineering and Development Co.

There are also independent Iranian energy firms, such as Pasargad Oil Co, Zagros Petrochem. Co, Sazeh Consultants, Qeshm Energy, and Sadid Industrial Group. Their relations with NIOC or the Revolutionary Guard (see below), are unclear, and none of these independent firms has been sanctioned under any U.S. law or Executive Order.

ISA and Other Sanctions Against the IRGC

Much of the work on Iran’s oil and gas fields is done through a series of contractors. Some of them, such as Khatam ol-Anbia and Oriental Kish, have been identified by the U.S. government as controlled by the IRGC and have been sanctioned under various Executive Orders, discussed below. The August 2011 confirmation of Khatam ol-Anbia’s chief, Rostam Ghasemi, as oil minister, has caused the U.S. government and many experts to assess that the IRGC role in Iran’s

energy sector as large and growing. Ghasemi has been subjected to asset freezes by the United States and an asset freeze and travel ban by the European Union. However, under an agreement between OPEC and Austria, Ghasemi is allowed to travel to Vienna (OPEC's headquarters) to attend OPEC meetings.

Several provisions of law have been enacted to deter foreign firms from partnering with any of the IRGC-affiliated energy companies. As noted above, Section 311 of the Iran Threat Reduction Act amended ISA to mandate a ban on government contracts for companies that fail to certify that they are not transacting business with the IRGC or any of its sanctioned affiliates. Section 302 of that Act requires application of five out of 12 ISA sanctions to persons that materially assist, with financing or technology, the IRGC, or assist or engage in "significant" transactions with any of its affiliates that are sanctioned under Executive Order 13382, 13224, or similar executive orders discussed below—or which are determined to be affiliates of the IRGC. *Section 302 did not amend ISA.*

Section 301 of the Iran Threat Reduction Act requires the President, within 90 days of enactment (by November 9, 2012), to identify "officials, agents, or affiliates" of the IRGC and to impose sanctions in accordance with Executive Order 13382 or 13224 (which are discussed later in this paper), including blocking any such designee's U.S.-based assets or property. Some of these designations, including of NIOC, were made by Treasury Department on November 8, 2012.

Section 303 of the Iran Threat Reduction Act requires the imposition of sanctions on agencies of foreign governments that provide technical or financial support, or goods and services to sanctioned (under U.S. executive orders or U.N. resolutions) members or affiliates of the IRGC. Sanctions include a ban on U.S. assistance or credits for that foreign government agency, a ban on defense sales to it, a ban on U.S. arms sales to it, and a ban on exports to it of controlled U.S. technology.

Sanctions Imposed Under ISA

The European Union opposed ISA as an extraterritorial application of U.S. law. In April 1997, the United States and the EU agreed to avoid a trade confrontation over ISA and a separate Cuba sanctions law (P.L. 104-114). The agreement involved the promise by the EU not to file any complaint with the World Trade Organization (WTO) over this issue, in exchange for the eventual May 18, 1998, announcement by the Clinton Administration to waive ISA sanctions ("national interest"—§9c—waiver) on the first project determined to be in violation. That project was a \$2 billion¹² contract, signed in September 1997, for Total SA of France and its partners, Gazprom of Russia and Petronas of Malaysia, to develop phases 2 and 3 of the 25+ phase South Pars gas field. The EU, for its part, pledged to increase cooperation with the United States on nonproliferation and counterterrorism. Then-Secretary of State Albright, in the May 18, 1998, waiver announcement, indicated that similar future such projects by EU firms in Iran would not be sanctioned, provided overall EU cooperation against Iranian terrorism and proliferation continued.¹³ However, the EU sanctions against Iran imposed since 2010 have largely rendered

¹² Dollar figures for investments in Iran represent public estimates of the amounts investing firms are expected to spend over the life of a project, which might in some cases be several decades.

¹³ Text of announcement of waiver decision by then Secretary of State Madeleine Albright, containing expectation of similar waivers in the future, at http://www.parstimes.com/law/albright_southpars.html.

this understanding moot because the EU countries have adopted sanctions against Iran nearly as strict as are U.S. sanctions.

ISA Violation Determinations and Exemptions

The Obama Administration has used ISA authorities to discourage companies from continuing their business with Iran. This is a contrast from the first 14 years after ISA's passage, in which successive Administrations hesitated to confront companies of partner countries. Despite investments made in Iran's energy sector, as shown in **Table 4**, no Administration made any determinations of ISA violations from 1998 until September 2010, causing several Members of Congress to question whether ISA was being implemented. State Department reports to Congress on ISA, required every six months, did not specifically state which foreign companies, if any, were being investigated for ISA violations. No publication of such deals has been placed in the *Federal Register*, as required by Section 5e of ISA. In an effort to address the congressional criticism, then-Under Secretary of State for Political Affairs William Burns testified before the House Foreign Affairs Committee on July 9, 2008, that the Statoil project (listed in **Table 4**) was under review for ISA sanctions. Statoil is incorporated in Norway, which is not an EU member, and did not fall under the 1998 U.S.-EU agreement discussed above.

Possibly in response to an October 2009 letter signed by 50 Members of Congress referencing **Table 4**, then Assistant Secretary of State for Near Eastern Affairs Jeffrey Feltman testified before the House Foreign Affairs Committee on October 28, 2009, that the Obama Administration would complete a preliminary review of investments in Iran for violations of ISA by December 11, 2009. He testified that some announced projects did not result in actual investment. On February 25, 2010, then Secretary of State Clinton testified before the House Foreign Affairs Committee that the State Department's preliminary review was completed and that some of the cases reviewed "deserve[] more consideration" and were undergoing additional scrutiny. The preliminary review was conducted, in large part, through State Department officials' contacts with their counterpart officials abroad and corporation officials, but the additional investigations of problematic investments would involve the intelligence community, according to Secretary Clinton. State Department officials said in November 2009 that they intended to determine violations within 180 days of the completion of the preliminary review, or by early August 2010. (The 180-day time frame was, according to the department officials, consistent with the Iran Freedom Support Act amendments to ISA discussed above, even though the 180-day time frame had not yet become mandatory). On June 22, 2010, then Assistant Secretary of State William Burns testified before the Senate Foreign Relations Committee that there were "less than 10" cases of possible ISA violations.

*September 30, 2010 Sanctions and Special Rule Exemptions*¹⁴

- A Swiss-based Iranian-owned oil trading company—*Naftiran Intertrade Company (NICO)*—became the first firm to be sanctioned under ISA. The three penalties selected were: a ban on Ex-Im Bank credits; a denial of dual use export licensing to the firm; and a denial of bank loans exceeding \$10 million. The mandatory ban on receiving U.S. government contracts applies as well.

¹⁴ State Department statement. September 30, 2010.

That same day, four major energy companies avoided sanctions under the ISA “special rule” for pledging to end their business in Iran:

- *Total* of France,
- *Statoil* of Norway,
- *ENI* of Italy, and
- *Royal Dutch Shell* of Britain and the Netherlands.

November 17, 2010, Special Rule for Inpex

- *Inpex* of Japan was exempted from sanctions under the special rule on November 17, 2010, according to a State Department announcement. The firm announced on October 15, 2010, that it is shedding its stake in the Azadegan development project shown in the table.

March 29, 2011, Sanctions Determination Against Belarusneft

Several foreign investment agreements with Iran were not covered in the September 2010 determination but remained under Administration scrutiny. The Administration stated that determinations would be made within 180 days (by April 1, 2011).

- On March 29, 2011, the State Department announced that one additional firm would be sanctioned under ISA—*Belarusneft*, a subsidiary of the Belarus government owned Belneftekhim—for a \$500 million contract with Naftiran (the company sanctioned in September 2010) to develop the Jofeir oil field discussed in **Table 4**. The three sanctions imposed were denial of Ex-Im Bank financing, denial of U.S. export licenses, and denial of U.S. loans above \$10 million. Other subsidiaries of Belneftekhim were sanctioned in 2007 under Executive Order 13405 related to U.S. policy on Belarus.

May 24, 2011, Sanctions Imposed on Gasoline-Related Shippers and April 12, 2013, Sanctions Lifted

On May 24, 2011, the Administration issued its first ISA sanctions determinations under Section 5(a)(3) of ISA (CISADA-amended “trigger”) for sales to Iran of gasoline and related equipment and services.¹⁵ The seven firms sanctioned were¹⁶

¹⁵ The reasons for the sanctions, including size of gasoline shipments to Iran, as well as the ISA-related sanctions selected, can be found at <http://www.state.gov/r/pa/prs/ps/2011/05/164132.htm>

¹⁶ The determinations of sanctionability of Allvale Maritime and SAMAMA were issued on September 13, 2011, as a “clarification” of the May 24 determinations, which named Ofer Brothers Group as sanctioned entities. Those two entities, as well as Tanker Pacific, are, according to an author conversation with an attorney for the Ofer Brothers Group, affiliated with a Europe-based trust linked to deceased Ofer brother Sami Ofer, and not Ofer Brothers Group based in Israel. The firms named were subjected primarily to the financial-related sanctions provided in ISA. The Administration stated that U.S.-based subsidiaries of PDVSA, such as Citgo, were not included in the determination and that U.S. purchases of Venezuelan oil would not be affected.

- *Petrochemical Commercial Company International (PCCI)* of Bailiwick of Jersey and Iran
- *Royal Oyster Group* (UAE)
- *Tanker Pacific* (Singapore)
- *Allvale Maritime*
- *Societie Anonyme Monegasque Et Aerienne (SAMAMA)*, Monaco)
- *Speedy Ship* (UAE/Iran)
- *Associated Shipbroking* (Monaco)
- *Petroleos de Venezuela (PDVSA)* of Venezuela

On April 12, 2013, the State Department announced it was lifting ISA sanctions on three of the sanctioned firms above: Tanker Pacific, SAMAMA, and Allvale Maritime.¹⁷ The State Department essentially applied the “special rule” to the three, announcing that sanctions were being lifted because the firms had provided “reliable assurances that they will not knowingly engage in such sanctionable activity in the future.”

January 12, 2012, Determinations on Gasoline Sellers

On January 12, 2012, the Administration imposed ISA sanctions (ban on U.S. export licenses for sales to the firms; a ban on Export Import Bank financing for them; and denial of loans of over \$10 million to them) on three additional gasoline sellers to Iran:

- Zhuhai Zhenrong Company (China), for brokering sales of \$500 million worth of gasoline to Iran between July 2010 and January 2011
- Kuo Oil Pte. Ltd. (Singapore), an energy trading firm that sold \$25 million worth of gasoline to Iran between late 2010 and early 2011
- FAL Oil Company Ltd. (UAE), an independent energy trader that sold Iran over \$70 million worth of gasoline in late 2010

August 10, 2012, Sanctions on Syrian Energy Firm

- The State Department sanctioned Sytrol, a Syrian government-run oil company, for selling Iran over \$36 million worth of gasoline in April 2012.

March 14, 2013, Determination Against Dimitris Cambis and Impire Shipping

- Acting under Section 5(a)(8) of ISA, a provision added by the Iran Threat Reduction Act (P.L. 112-158), which sanctions owners of a vessels that conceal the Iranian origin of crude oil or petroleum productions, ISA sanctions (and Treasury Dept. sanctions under Executive Order 13599, which blocks property of the government of Iran) were imposed on Dr. Dimitris Cambis and his firm Impire Shipping. Also sanctioned were Kish Protection and Indemnity and

¹⁷ Department of State. “Delisting Companies Sanctioned Under the Iran Sanctions Act.” April 12, 2013.

Bimeh Markazi-Central Insurance of Iran (CII), and senior officials of these companies, for providing insurance to NITC. The Treasury sanctions were imposed on Cambis, Impire, and eight UAE-based front companies used to conceal the Iranian oil transactions, as well as eight named oil tankers these companies.

May 31 Determination Against Ferland Company Ltd.

- After investigations related to the determination against Dimitris Cambis, above, the State Department sanctioned Ferland Company Ltd. of Cyprus and Ukraine for cooperating with NITC to sell Iranian crude oil deceptively. Sanctions were also imposed on Ferland by Treasury under Executive Order 13608.

Sanctioning Oil Payments to Iran’s Central Bank: Section 1245 of FY2012 National Defense Authorization Act (P.L. 112-81)

In late 2011, some in Congress believed that action was needed to cut off the mechanisms oil importers use to pay Iran hard currency for oil. Proposals to cut Iran’s Central Bank from the international financial system were based on that objective, as well as the view that the Central Bank helps other Iranian banks circumvent the U.S. and U.N. banking pressure. Some argued the Treasury Department should designate the Central Bank as a proliferation entity under Executive Order 13382 or a terrorism supporting entity under Executive Order 13224, but the Administration did not do so.

In November 2011, provisions to sanction foreign banks that deal with Iran’s Central Bank were incorporated a FY2012 national defense authorization bill (H.R. 1540). The provision was modified slightly in conference action on the latter bill, enacted and signed on December 31, 2011 (P.L. 112-81). Section 1245 of P.L. 112-81, provides for the following:

- Requires the President to prevent a foreign bank from opening an account in the United States—or impose strict limitations on existing U.S. accounts—if that bank processes payments through Iran’s Central Bank.
- The provision applies to *non-oil related* transactions with the Central Bank of Iran 60 days after enactment (by February 29, 2012).
- The provision applies to a foreign central bank only if the transaction with Iran’s Central Bank is for oil purchases.
- Provides for a renewable waiver of 120 days duration if the President determines that doing so is in the national security interest.
- The provision applied to transactions with the Central Bank for *oil purchases* only after 180 days (as of June 28, 2012).
- Sanctions on transactions for oil apply only if the President certifies to Congress—90 days after enactment (by March 30, 2012), based on a report by the Energy Information Administration to be completed 60 days after enactment (by February 29, 2012)—that the oil market *is* adequately supplied. The EIA report and Administration certification are required every 90 days thereafter.

- Foreign banks can be granted an exemption from sanctions (for any transactions with the Central Bank, not just for oil) if the President certifies that the parent country of the bank has *significantly reduced* its purchases of oil from Iran. That determination is to be reviewed every 180 days. For countries whose banks receive an exemption, the 180 day time frame begins from the time that parent country last received an exemption.

Although Treasury Under Secretary David Cohen told the Senate Foreign Relations Committee on December 2, 2011 that the provision could lead to a rise in oil prices that would benefit Iran, the Administration later saw value in using the provision to pressure Iran. In the signing statement on the overall bill, President Obama indicated he would implement the provision so as not to damage U.S. relations with partner countries.

Implementation/Exemptions Issued

On February 27, 2012, the Department of the Treasury announced regulations to implement Section 1245. The first required EIA report was issued on February 29, 2012, saying “EIA estimates that the world oil market has become increasingly tight over the first two months of this year.” On March 30, 2012, President Obama determined that there is a sufficient supply of oil worldwide to permit countries to reduce oil purchases from Iran. An EIA report of April 27, 2012, and Administration determination of June 11, 2012, made similar findings and certifications, triggering potential sanctions as of June 28, 2012. Subsequent EIA reports and Administration determinations of the state of the oil market have kept the sanctions triggers in place.

The lack of precise definition of “significant reduction” in oil purchases gave the Administration substantial flexibility in dealing with foreign governments. On January 19, 2012, the Senators who drafted the provision wrote to Treasury Secretary Geithner agreeing with outside experts that the Treasury Department should define “significant reduction” as an 18% purchase reduction based on total price paid (not just volumes).¹⁸ Administration officials said they adopted that standard in considering exemptions. Countries must continue to reduce their oil buys from Iran—relative to the previous 180-day period—to retain the exemption. Retaining the exemption has become crucial to continuing oil-related commerce with Iran, because Executive Order 13622 and P.L. 112-158 sanctions oil dealings with Iran unless a parent country has a current exemption. P.L. 112-158 also amended Section 1245 such that any country that has received an exemption would retain that exemption if it completely ceases purchasing oil from Iran. The EU embargo on purchases of Iranian oil, announced January 23, 2012, and which took full effect by July 1, 2012, implied that virtually all EU oil customers of Iran would obtain exemptions. The table later in this paper on major Iranian oil customers indicates cuts made by major customers compared to 2011.

Exemptions Issued¹⁹

- On March 20, 2012, the Secretary of State announced the first group of 11 countries that had achieved an exemption for significantly reducing oil purchases from Iran: Belgium, the Czech Republic, France, Germany, Greece, Italy, Japan,

¹⁸ Text of letter from Senators Mark Kirk and Robert Menendez to Secretary Geithner. January 19, 2012.

¹⁹ Announcements by the Department of State. March 20, 2012, June 11, 2012, and June 28, 2012.

the Netherlands, Poland, Spain, and Britain. These exemptions were all renewed (for 180 days) on September 14, 2012,²⁰ and again on March 13, 2013.

- On June 11, 2012, the Administration granted seven more exemptions based on reductions of oil purchases from Iran of about 20% in each case: India, Korea, Turkey, Malaysia, South Africa, Sri Lanka, and Taiwan. All seven exemptions were renewed on December 7, 2012, for another 180 days.
- On June 28, 2012, the Administration granted exemptions to China and Singapore, two remaining major Iran oil customers, with China the single largest buyer (about 550,000 barrels per day in 2011). Both exemptions were renewed on December 7, 2012.

Seventeen EU countries have not been granted exemptions. Some of them were not customers for Iran's oil and cannot therefore "significantly reduce" their buys from Iran any further. Some of these countries say that the provision amounts to a de facto U.S. effort to enforce a total ban on EU trade with Iran. Earlier EU opposition to sanctioning Iran's Central Bank was based on humanitarian grounds. One of the Central Bank's roles is to keep Iran's currency, the rial, stable. It does so by using hard currency to buy rials to raise the currency value, or to sell rials to bring the value down. An unstable currency could harm Iran's ability to import some needed foodstuffs and medical products, according to those opposing that sanction.

Iran Threat Reduction Act Impedes Repatriation of Hard Currency to Iran

The ability of Iran to acquire hard currency is further impeded by a provision of the Iran Threat Reduction Act (P.L. 112-158), which went into effect 180 days after enactment (February 6, 2013). Section 504 of the Iran Threat Reduction Act amended P.L. 112-81 to require that any funds owed to Iran as a result of permitted or exempted transactions (for oil sales, for example) be credited to an account located in the country with primary jurisdiction over the foreign bank making the transaction. This has the net effect of preventing Iran from bringing earned hard currency back to Iran and compelling it to buy the products of the oil customer countries.

Expanded Sanctions on Energy and Other Trade with Iran Imposed by Iran Freedom and Counter-Proliferation Act (P.L. 112-239)

At the end of 2012, Congress passed legislation expanding authorities for U.S. sanctions against foreign firms that assist certain key sectors of Iran's economy. A Senate provision was incorporated into the conference report on the National Defense Authorization Act for FY2013 (H.R. 4310, P.L. 112-239, signed on January 2, 2013) as Subtitle D, "The Iran Freedom and Counter-Proliferation Act." The major provisions take effect 180 days after enactment (July 1, 2013) and include waiver provisions. *The provisions impose ISA sanctions but do not amend ISA.*

- Section 1244 blocks U.S.-based property and U.S.-based banking activity, and imposes at least five ISA sanctions, on entities that provide goods or services to the energy, shipbuilding, and shipping sectors of Iran, or to port operations there—or which provide insurance for such transactions. *The sanctions do not apply when such transactions involve purchases of Iranian oil by countries that*

²⁰ "Statement on Iran" by Secretary of State Clinton. September 14, 2012.

have active exemptions under P.L. 112-81 or to the purchase of natural gas from Iran (or most transactions related to such gas purchases).

- Section 1245 imposes at least five ISA sanctions (but not sanctions on imports from the United States) on any entity that provides precious metals to Iran (such as gold), or semi-finished metals or software for integrating industrial processes. *There is no exception to this sanction for countries exempted under P.L. 112-81.*
- Section 1246 imposes at least five ISA sanctions (but not the ISA sanctions on imports by the United States) on any entity that provides underwriting services, insurance, or reinsurance for a broad range of transactions with Iran, including those related to shipping oil, gasoline, or other goods for the energy, shipping, or shipbuilding sectors in Iran. *There is no exception to this sanction for countries exempted under P.L. 112-81.*
- Section 1248 sanctions Iran’s state broadcasting establishment (Islamic Republic of Iran Broadcasting) as a human rights abuser, triggering sanctions under Section 105 of CISADA.
- Section 1249 amends CISADA by imposing sanctions (U.S. visa ban, U.S.-based property blocked) on Iranian persons government that are engaged in corruption or “diversion of goods”—such as cornering the market for certain imports, including advanced medicines.

Ban on U.S. Trade and Investment with Iran

Recent U.S. sanctions seek to compel foreign firms to exit various segments of the Iran market. The United States has long had a wide-ranging ban on U.S. trade with and investment in Iran: such a ban was imposed on May 6, 1995, by President Clinton, through Executive Order 12959. The Order was issued under the authority primarily of the International Emergency Economic Powers Act (IEEPA, 50 U.S.C. 1701 et seq.).²¹ IEEPA gives the President wide powers to regulate commerce with a foreign country when a state of emergency is declared in relations with that country. Executive Order 12959 followed an earlier March 1995 executive order barring U.S. investment in Iran’s energy sector, which was imposed when President Clinton that month declared that a state of emergency exists with respect to Iran. A subsequent executive order, 13059 (August 19, 1997) prevented U.S. companies from knowingly exporting goods to a third country for incorporation into products destined for Iran.

Each March since 1995, the U.S. Administration has renewed a declaration of a state of emergency that triggers the President’s trade regulation authority under IEEPA. The operation of the trade regulations is stipulated in Section 560 of the Code of Federal Regulations (Iranian Transactions Regulations, ITRs).

²¹ The executive order was issued not only under the authority of IEEPA but also: the National Emergencies Act (50 U.S.C. 1601 et seq.; §505 of the International Security and Development Cooperation Act of 1985 (22 U.S.C. 2349aa-9) and §301 of Title 3, United States Code.

Major Provisions of the Trade and Investment Ban: What Is Allowed or Prohibited

The following conditions, as administered by the Office of Foreign Assets Control (OFAC) of the Treasury Department, apply to the U.S. trade ban on Iran (“Iran Transaction Regulations,” ITRs):

- *Oil Dealings.* The 1995 trade ban greatly expanded a 1987 ban on imports from Iran under Executive Order 12613 (October 29, 1987). That 1987 ban was imposed under authorities provided in Section 505 of the International Security and Development Cooperation Act of 1985 (22 U.S.C. 2349aa-9). The import ban barred U.S. oil companies from importing Iranian oil but did not ban them from buying Iranian oil and trading it overseas. The 1995 ban prohibits such trading of Iranian oil overseas. The 1995 trade ban does allow U.S. companies to apply for licenses to conduct “swaps” of Caspian Sea oil with Iran. However, these swaps have been prohibited in practice; a Mobil Corporation application to do so was denied in April 1999, and no known applications were submitted since.
- *Civilian Airline Parts.* Goods related to the safe operation of civilian aircraft may be licensed for export to Iran (§560.528 of Title 31, C.F.R.). In 2006, the George W. Bush Administration, in the interests of safe operations of civilian aircraft, permitted a sale by General Electric of Airbus engine spare parts to be installed on several Iran Air passenger aircraft (by European airline contractors). An Obama Administration intent to sell Iran data to repair certain GE engines for its legacy American-made aircraft, in order to ensure safe operation, was notified to Congress on March 16, 2011. On June 23, 2011, the Administration sanctioned Iran Air as a proliferation entity under Executive Order 13382, rendering any future licensing of parts or repairs for Iran Air unclear.
- *Personal Communications and Remittances.* The ban does not apply to personal communications (phone calls, e-mails), or to personal remittances. In February 2012, OFAC clarified guidance for personal remittances to relatives in Iran. According to that guidance, U.S. banks can process remittances to family members resident in Iran as long as the remittance is routed through a third country bank and the receiving Iranian bank is not under U.S. sanction.
- On May 30, 2013, OFAC issued a general license for the exportation to Iran of goods and services, on a fee basis, that enhance the ability of the Iranian people to access communication technology (see below under sanctions relating to promoting democracy and free expression in Iran).
- *Food and Medical Exports.* Since April 1999, commercial sales of food and medical products to Iran have been allowed, on a case-by-case basis and subject to OFAC licensing. On October 22, 2012, OFAC attempted to facilitate medical sales by issuing a list of medical products, such as scalpels, prosthetics, canes, burn dressings, and other products that could be sold to Iran under “general license”—no advanced permission required. According to OFAC, licenses for exports of medicines to treat HIV and leukemia are routinely expedited for sale to Iran, and license applications are viewed favorably for business school exchanges, earthquake safety seminars, plant and animal conservation, and medical training in Iran.

OFAC regulations now have a specific definition of “food” that can be licensed for sale to Iran, and that definition excludes alcohol, cigarettes, gum, or fertilizer.²² This definition might have been a reaction to a press account on December 24, 2010,²³ that said that OFAC had approved exports to Iran of such condiments as ice cream sprinkles, chewing gum, food additives, hot sauces, body-building supplements, and other goods that appear to have uses other than those that are purely humanitarian or nutritive. U.S. exporters widely mentioned include Mars Co. (candy manufacturer); Kraft Foods; Wrigley’s (gum); and McCormick and Co. (spices). Some previously licensed U.S. goods have been sold through a Revolutionary Guard-owned chain of stores in Iran called Qods; as well as a government-owned Shahrvand store and a chain called Refah. OFAC officials indicated in the press accounts that such licenses were not in contradiction with U.S. law or policy, although there might have been less than full scrutiny of some Iranian end users and that such scrutiny would be increased in future licensing decisions.

- *Export Financing.* As far as financing of approved U.S. sales to Iran, private letters of credit can be used to finance approved transactions. But, no U.S. government credit guarantees are available and U.S. exporters are not permitted to deal directly with Iranian banks. Title IX of the FY2001 agriculture appropriations law (P.L. 106-387)²⁴ contained a provision banning the use of official credit guarantees for food and medical sales to Iran and other countries on the U.S. terrorism list, except Cuba, although allowing for a presidential waiver to permit such credit guarantees. No U.S. Administration has authorized credit guarantees, to date. In December 2004, the trade ban was further modified to allow Americans to engage in ordinary publishing activities with entities in Iran (and Cuba and Sudan).
- *Specific Exceptions.* Based on a provision of CISADA, the Iran trade regulations allow for licensing of export on an emergency basis if the President considers such exports in the national interest. Examples could include equipment to help Iran contain an oil spill or a disaster at its Bushehr nuclear plant, or to rescue earthquake victims.

Some relaxations to the trade ban during 1999-2010 account for the fact that U.S. trade with Iran expanded during that period. In April 2000, the regulations were eased to allow U.S. importation of Iranian nuts, fruit products (such as pomegranate juice), carpets, and caviar. Trade financing was permitted for U.S. importers of these goods. CISADA (see above) restored the import ban as of September 29, 2010, explaining why U.S. imports from Iran since that time have been negligible (a total of about \$2 million for all of 2012). The U.S. imports from Iran consist primarily of artwork for exhibitions around the United States (and count as imports even though the works return to Iran after the exhibitions conclude). For all of 2012, U.S. exporters sold about \$250 million in goods to Iran, mostly grain sales. That is up about 10% from 2011.

²³ The information in this bullet is taken from: Becker, Jo. “With U.S. Leave, Companies Skirt Iran Sanctions.” *New York Times*, December 24, 2010.

²⁴ The title is called the “Trade Sanctions Reform and Export Enhancement Act of 2000.

Non-Application to Refined Oil *with* Iranian Content

The ban on trade with Iran targets items produced in and originating from Iran itself. Existing regulations do not ban the importation, from foreign refiners, of gasoline or other energy products in which Iranian oil is contained and mixed with oil from other producers. The product of a refinery is considered a product of the country where that refinery is located, and not a product of Iran, even if the refined product has some Iran-origin crude oil. Much of the Iranian oil that is mixed and imported into the United States was imported from EU countries, such as the Netherlands, which has major refineries in Rotterdam, in particular. However, the EU ban on purchases of Iranian oil has largely mooted this issue, since no EU refineries are importing any Iranian oil as of July 1, 2012. Only a few other refineries worldwide both continue to receive Iranian oil and export gasoline to the United States—and U.S. gasoline imports from those refineries are minor. Some experts say that it would be feasible to exclude Iranian content from any refinery, if there were a decision to ban U.S. imports of products with any Iranian content.

Application to Humanitarian Donations and Support

Earthquakes and other disasters in Iran sometimes raise questions about how the U.S. trade regulations on Iran apply to humanitarian relief and donations. Private donations by U.S. residents to Iranian victims of natural disasters (such as mailed packages of food, toys, clothes, etc.) are not prohibited. However, financial donations to relief organizations, because such transfers generally require use of the international banking system, does require a specific OFAC license. Similarly, NGOs that want to perform relief efforts in Iran require a specific license to do so. According to OFAC guidance, U.S. non-governmental organizations (NGOs) require a specific license to operate in Iran, but some of these NGOs say the licensing requirements are too onerous to make work in Iran practical. For example, there are restrictions on how a U.S. NGO may expend funds in Iran, for example to hire Iranian nationals.

In some cases, such as the earthquake in Bam in 2003 and the earthquake in northwestern Iran in August 2012, OFAC has issued blanket temporary general licensing for relief organizations to perform relief efforts in Iran. The latest temporary license that responded to the August 2012 earthquake in Iran was issued on August 21, 2012, for a period of 45 days (until October 5), and then extended until November 19, 2012. Under this temporary general license, an NGO can transfer up to \$300,000 for efforts in Iran under general license (no license application needed). Transferring larger amounts is possible, but would require specific license. In the Bam case, the blanket licensing was extended several times but expired in March 2004.

Application to Foreign Subsidiaries of U.S. Firms

The U.S. trade ban does not bar subsidiaries of U.S. firms from dealing with Iran, as long as the subsidiary has no operational relationship to—or control by—the parent company. For legal and policy purposes, foreign subsidiaries are considered foreign persons, not U.S. persons, and are subject to the laws of the country in which the subsidiaries are incorporated. Section 218 of the Iran Threat Reduction and Syrian Human Rights Act (P.L. 112-158) applies the U.S. trade ban to foreign subsidiaries if (1) the subsidiary is more than 50% owned by the U.S. parent; (2) the parent firm holds a majority on the Board of Directors; or (3) the parent firm directs the operations of the subsidiary. However, many subsidiaries operate entirely autonomously and might not meet the criteria for sanctionability stipulated in that law.

Financial Sanctions: CISADA and Sanctions on Dealings with Iran's Central Bank

U.S. efforts to shut Iran out of the international banking system have gained strength as other countries have joined the effort. These efforts have been implemented by the Treasury Department through progressively strong actions discussed below, particularly with legislation in late 2011 to cut off Iran's Central Bank from the international financial system.

Early Efforts: Targeted Financial Measures

Since 2006, the Treasury Department has used its own authorities to persuade foreign banks to cease dealing with Iran by attempting to convince the banks that Iran is using the international financial system to fund terrorist groups and acquire weapons-related technology. According to a GAO report of February 2013, the Treasury Department made overtures to 145 banks in 60 countries, including several visits to banks and officials in the UAE, where Iran seeks to route much of its banking. The program convinced at least 80 foreign banks to cease handling financial transactions with Iranian banks. Levey left office in April 2011 and was replaced by David Cohen. As of November 6, 2008, the Treasury Department has barred U.S. banks from handling any indirect transactions ("U-turn transactions," meaning transactions with non-Iranian foreign banks that are handling transactions on behalf of an Iranian bank) with all Iranian banks.²⁵

The Treasury Department also used punishments against banks that have helped Iran violate U.S. financial restrictions. In 2004, the Treasury Department fined UBS \$100 million for the unauthorized movement of U.S. dollars to Iran and other sanctioned countries, and in December 2005, the Treasury Department fined Dutch bank ABN Amro \$80 million for failing to fully report the processing of financial transactions involving Iran's Bank Melli (and another bank partially owned by Libya). In the biggest such instance, on December 16, 2009, the Treasury Department announced that Credit Suisse would pay a \$536 million settlement to the United States for illicitly processing Iranian transactions with U.S. banks. In June 2012, Dutch bank IMG agreed to pay a \$619 million penalty for moving billions of dollars through the U.S. financial system, using falsified records, on behalf of Iranian and Cuban clients. Standard Chartered agreed in August 2012 to a \$340 million settlement with New York State regulators for allegedly processing transactions with Iran in contravention of U.S. regulations.²⁶

In late 2009, the U.S. Attorney for the Southern District of New York seized the assets of the Assa Company, a UK-chartered entity. Assa allegedly was maintaining the interests of Bank Melli in an office building in New York City. An Iranian foundation, the Alavi Foundation, allegedly is an investor in the building.

Banking Provisions of CISADA

The Treasury Department efforts were enhanced substantially by the authorities of Section 104 of CISADA and U.N. and EU sanctions. The intent of Section 104 is to weaken Iran's economy by

²⁵ Kessler, Glenn. "U.S. Moves to Isolate Iranian Banks." *Washington Post*, September 9, 2006.

²⁶ Jessica Silver-Greenberg. "Regulator Says Bank Helped Iran Hide Deals" *New York Times*, August 7, 2012.

preventing Iranian traders from obtaining letters of credit to buy or sell goods. The binding provisions of Section 104 of CISADA require the Secretary of the Treasury to prescribe several sets of regulations to forbid U.S. banks from opening new “correspondent accounts” or “payable-through accounts”(or force the cancellation of existing such accounts) for foreign banks that process “significant transactions” with:

- Any foreign entity that is sanctioned by Executive Order 13224 (terrorism activities) or 13382 (proliferation activities). These Orders are discussed later in this report. To date, several hundred entities (including individuals), many of them Iran-based or of Iranian origin, have been sanctioned under 13224 or 13382. A full list of sanctioned entities is at the end of this report.
- The IRGC *or* any of its agents or affiliates that are sanctioned under any U.S. Executive Order.
- Any entity designated under the various U.N. Security Council resolutions adopted to impose sanctions on Iran.
- Any entity that assists Iran’s Central Bank in efforts to help the IRGC acquire weapons of mass destruction or support international terrorism.

Foreign banks that do not have operations in the United States typically establish correspondent accounts or payable-through accounts with U.S. banks as a means of accessing the U.S. financial system and financial industry. The provision enables the Treasury Department to determine what constitutes a “significant” financial transaction.

Related Measure Added by FY2013 National Defense Authorization Act

Section 1244(d) of the FY2013 National Defense Authorization Act (P.L. 112-239) applies the CISADA sanctions to those foreign banks that facilitate transactions with Iran’s energy, shipping, and shipbuilding sectors, including with NIOC, NITC, and IRISL. The provision does not specifically amend CISADA.

Implementation of Section 104: Sanctions Imposed

On July 31, 2012, the Administration announced the first sanctions under Section 104 of CISADA. Sanctioned were: the Bank of Kunlun in China and the Elaf Islamic Bank in Iraq. However, on May 17, 2013, the Treasury Department lifted sanctions on Elaf Islamic Bank in Iraq, asserting that the bank had reduced its exposure to the Iranian financial sector and stopped providing services to an Iranian bank sanctioned by the EU (Export Development Bank of Iran).

Iran Designated a Money-Laundering Jurisdiction

On November 21, 2011, the Administration took further steps to isolate Iran’s banking system by identifying Iran as a “jurisdiction of primary money laundering concern”²⁷ under Section 311 of the USA Patriot Act (31 U.S.C. 5318A). The Treasury Department determined that Iran’s financial system, including the Central Bank, constitutes a threat to governments or financial

²⁷ <http://www.treasury.gov/press-center/press-releases/Pages/tg1367.aspx>.

institutions that do business with these banks. The designation carried no immediate penalty, but it imposed additional requirements on U.S. banks to ensure against improper Iranian access to the U.S. financial system.

Executive Order 13599 Impounding Iranian Assets

In part to address congressional sentiment for extensive sanctions on the Central Bank, on February 5, 2012, the President issued Executive Order 13599, imposing sanctions on the Central Bank and on other entities determined to be owned or controlled by the Iranian government. The Order requires that any U.S.-based assets of the Central Bank of Iran, or of any Iranian government-controlled entity, be impounded by U.S. financial institutions. U.S. persons are prohibited from any dealings with such entities. U.S. financial institutions previously were required to merely refuse such transactions with the Central Bank, or return funds to it. Several designations have been made under Order, as shown in **Table 6**.

Sanctions on Iran's Central Bank in the FY2012 NDAA

Sanctions against financial transactions with Iran's Central Bank, enacted in the FY2012 National Defense Authorization Act (P.L. 112-81), are discussed above under energy-related sanctions.

Electronic Payments (SWIFT) Cutoff

Some in Congress sought to stop electronic banking transfer systems, such as Brussels-based SWIFT (Society of Worldwide Interbank Financial Telecommunications), from processing payments for Iranian banks. Section 220 of P.L. 112-158 requires reports on electronic payments systems such as SWIFT that might be doing business with Iran, but does not mandate sanctions against such systems. SWIFT acceded to an EU request to cut off sanctioned Iranian banks in March 2012, as discussed in the section on Europe later in this paper.

Terrorism-Related Sanctions

Iran was designated a "state sponsor of terrorism" on January 23, 1984, following the October 1983 bombing of the U.S. Marine barracks in Lebanon perpetrated by elements that later became Hezbollah. This designation triggers substantial sanctions on any nation so designated.

Sanctions Triggered by Terrorism List Designation: Ban on U.S. Aid, Arms Sales, Dual-Use Exports, and Certain Programs for Iran

The U.S. naming of Iran as a "state sponsor of terrorism," commonly referred to as Iran's placement on the U.S. "terrorism list," triggers several sanctions. Terrorism list designations are made under the authority of Section 6(j) of the Export Administration Act of 1979 (P.L. 96-72, as amended), sanctioning countries determined to have provided repeated support for acts of international terrorism. The sanctions triggered by Iran's continued listing are:

- Restrictions on sales of U.S. dual use items (Export Administration Act, as continued through presidential authorities under the International Emergency

Economic Powers Act, IEEPA, as implemented by executive orders). Under other laws, the designation bans direct U.S. financial assistance to Iran (§620A of the Foreign Assistance Act, FAA, P.L. 87-195) and arms sales to Iran (§40 of the Arms Export Control Act, P.L. 95-92, as amended), and requires the United States to vote to oppose multilateral lending to the designated countries (§327 of the Anti-Terrorism and Effective Death Penalty Act of 1996, P.L. 104-132). Waivers are provided under these laws. In addition, successive foreign aid appropriations laws since the late 1980s have banned direct assistance to Iran (loans, credits, insurance, Ex-Im Bank credits) without providing for a waiver.

- Under the Anti-Terrorism and Effective Death Penalty Act (§§325 and 326 of P.L. 104-132), a requirement that the President to withhold U.S. foreign assistance to any country that provides to a terrorism list country foreign assistance or arms. Waivers are provided. Section 321 of that act also makes it a criminal offense for U.S. persons to conduct financial transactions with terrorism list governments.

Aside from the terrorism list designation, Section 307 of the FAA (added in 1985) names Iran as unable to benefit from U.S. contributions to international organizations, and require proportionate cuts if these institutions work in Iran. For example, if an international organization spends 3% of its budget for programs in Iran, then the United States is required to withhold 3% of its contribution to that international organization. No waiver is provided for.

No Ban on U.S. Humanitarian Aid

The terrorism list designation, and other U.S. sanctions laws, do not bar disaster aid. The United States donated \$125,000, through relief agencies, to help victims of two earthquakes in Iran (February and May 1997); \$350,000 worth of aid to the victims of a June 22, 2002, earthquake; and \$5.7 million in assistance (out of total governmental pledges of about \$32 million) for the victims of the December 2003 earthquake in Bam, Iran, which killed as many as 40,000 people. The U.S. military flew in 68,000 kilograms of supplies to Bam.

Executive Order 13224: Sanctioning Terrorism Supporting Entities

Executive Order 13324 (September 23, 2001) authorizes the President to freeze the assets of and bar U.S. transactions with entities determined to be supporting international terrorism. This Order was issued two weeks after the September 11, 2001 attacks on the United States, under the authority of the IEEPA, the National Emergencies Act, the U.N. Participation Act of 1945, and Section 301 of the U.S. Code, and initially targeted Al Qaeda-related entities. In recent years, the Order has increasingly been applied to Iranian entities. Such Iran-related entities named and sanctioned under this order are in **Table 6**.

Implementation

Entities sanctioned under the Order for terrorism-related activities with Iran are listed in the table at the end of this paper.

Proliferation-Related U.S. Sanctions

The state sponsor of terrorism designation, discussed above, bars Iran from U.S. exports of technology that can be used for weapons of mass destruction programs (WMD). Iran-specific anti-proliferation laws discussed below,²⁸ and Executive Order 13382 (June 28, 2005), also seek to prevent Iran from receiving advanced technology from the United States. Some of these laws and executive measures seek to penalize foreign firms and countries that provide equipment to Iran's WMD programs.

Iran-Iraq Arms Nonproliferation Act

The Iran-Iraq Arms Nonproliferation Act (P.L. 102-484) imposes a number of sanctions on foreign entities that supply Iran with WMD technology or “destabilizing numbers and types of conventional weapons.” Sanctions imposed on violating entities include a ban, for two years, on U.S. government procurement from that entity, and a two-year ban on licensing U.S. exports to that entity. A sanction to ban imports to the United States from the entity is authorized.

If the violator is determined to be a foreign country, sanctions to be imposed are a one-year ban on U.S. assistance to that country; a one-year requirement that the United States vote against international lending to it; a one-year suspension of U.S. co-production agreements with the country; a one-year suspension of technical exchanges with the country in military or dual use technology; and a one-year ban on sales of U.S. arms to the country. The President is also authorized to deny the country most-favored-nation trade status; and to impose a ban on U.S. trade with the country. The Act (Section 1603) also provides for a “presumption of denial” for all dual use exports to Iran (which would include computer software). A waiver to permit such exports, on a case-by-case basis, is provided for.

Iran-North Korea-Syria Nonproliferation Act

The Iran Nonproliferation Act (P.L. 106-178), now called the Iran-North Korea-Syria Non-Proliferation Act (INKSNA), authorizes sanctions on foreign *persons* (individuals or corporations, not countries or governments) that are determined by the Administration to have assisted Iran's WMD programs. Sanctions imposed include (1) a prohibition on U.S. exportation of arms and dual use items to the sanctioned entity; and, under Executive Order 12938 (of November 14, 1994), a ban on U.S. government procurement and of imports to the United States from the sanctioned entity. The law also bans U.S. extraordinary payments to the Russian Aviation and Space Agency in connection with the international space station unless the President can certify that the agency or entities under its control had not transferred any WMD or missile technology to Iran within the year prior.²⁹ (A continuing resolution for FY2009, which funded the U.S. government through March 2009, waived this law to allow NASA to continue to use Russian vehicles to access the International Space Station.) **Table 6** lists entities sanctioned under this law.

²⁸ Such laws include the Atomic Energy Act of 1954 and the Energy Policy Act of 2005 (P.L. 109-58).

²⁹ The provision contains certain exceptions to ensure the safety of astronauts, but it nonetheless threatened to limit U.S. access to the international space station after April 2006, when Russia started charging the United States for transportation on its Soyuz spacecraft. Legislation in the 109th Congress (S. 1713, P.L. 109-112) amended the provision in order to facilitate continued U.S. access and extended INA sanctions provisions to Syria.

Executive Order 13382

Executive Order 13382 (June 28, 2005) allows the President to block the assets of proliferators of weapons of mass destruction (WMD) and their supporters under the authority granted by the International Emergency Economic Powers Act (IEEPA, 50 U.S.C. 1701 et seq.), the National Emergencies Act (50 U.S.C. 1601 et seq.), and Section 301 of Title 3, United States Code.

Implementation

Entities sanctioned under the Order for dealings with Iran are listed in the tables at the end of this paper. As an example, the IRGC is named as a proliferation entity under the Order.

Foreign Aid Restrictions for Suppliers of Iran

In addition, successive foreign aid appropriations punish the Russian Federation for assisting Iran by withholding 60% of any U.S. assistance to the Russian Federation unless it terminates technical assistance to Iran's nuclear and ballistic missiles programs.

Promoting Divestment

A recent trend in Congress and in several states has been to require or call for divestment of shares of firms that have invested in Iran's energy sector at the levels sanctionable under ISA.³⁰ The intent of doing so is to express the view of Western and other democracies that Iran is an outcast internationally. A divestment provision was contained in CISADA (P.L. 111-195)—in particular providing a "safe harbor" for investment managers who sell shares of firms that invest in Iran's energy sector.

Section 219 of the Iran Threat Reduction and Syria Human Rights Act of 2012 requires companies, in their reports to the Securities and Exchange Commission, to disclose whether it or any corporate affiliate has engaged in any sanctionable transactions with Iran under ISA, CISADA, and other applicable laws.

U.S. Sanctions Intended to Support Democratic Change in Iran or Reduce Its Regional Influence

A trend in U.S. policy and legislation since the June 12, 2009 election-related uprising in Iran has been to support the ability of the domestic opposition in Iran to communicate, to reduce the regime's ability to monitor or censor Internet communications, and to sanction Iranian officials that commit human rights abuses. Proposals to sanction the IRGC represent one facet of that trend because the IRGC is not only involved in Iran's WMD programs but it is also the key instrument through which the regime has suppressed the pro-democracy movement. Earlier, the Iran

³⁰ For information on the steps taken by individual states, see National Conference of State Legislatures. State Divestment Legislation.

Freedom Support Act (IFSA, P.L. 109-293), authorized “sums as may be necessary” to assist Iranians who are “dedicated” to “democratic values . . . and the adoption of a democratic form of government in Iran”; and “advocates the adherence by Iran to nonproliferation regimes.”

Expanding Internet and Communications Freedoms

Some laws and Administration action focus on expanding Internet freedom in Iran or preventing the Iranian government from using the Internet to identify opponents. Subtitle D of the FY2010 Defense Authorization Act (P.L. 111-84), called the “VOICE” (Victims of Iranian Censorship) Act contained several provisions to increase U.S. broadcasting to Iran and to identify (in a report to be submitted 180 days after enactment) companies that are selling Iran technology equipment that it can use to suppress or monitor the Internet usage of Iranians. The Act authorized funds to document Iranian human rights abuses since the June 2009 presidential election. Section 1241 of the Act also required an Administration report by January 31, 2010 on U.S. enforcement of sanctions against Iran, and the effect of those sanctions on Iran.

CISADA Sanctions Firms that Sell Censorship Gear to the Regime

In the 111th Congress, the “Reduce Iranian Cyber-Suppression Act,” (S. 1475 and H.R. 3284) was incorporated into CISADA as Section 106. The section prohibits U.S. government contracts with foreign companies that sell technology that Iran could use to monitor or control Iranian usage of the Internet. The provisions were directed, in part, against firms, including a joint venture between Nokia (Finland) and Siemens (Germany), reportedly sold Internet monitoring and censorship technology to Iran in 2008.³¹ Section 103(b)(2) of CISADA exempts from the U.S. export ban on Iran equipment to help Iranians communicate and use the Internet.

Implementation

On March 8, 2010, even before CISADA was enacted, OFAC amended the Iran Transactions Regulations that implement the U.S.-Iran trade ban to provide for a general license for providing to Iranians free mass market software in order to facilitate Internet communications. The ruling appeared to incorporate the major features of a bill in the 111th Congress, the “Iran Digital Empowerment Act” (H.R. 4301). The OFAC determination required a waiver of the provision of the Iran-Iraq Arms Nonproliferation Act (Section 1606 waiver provision) discussed above.

After CISADA was enacted, on March 20, 2012 the Administration announced a licensing policy to promote Internet freedom in Iran. The Treasury Department announced that several additional types of software and information technology products would be able to be exported to Iran under general license, including personal communications, personal data storage, browsers, plug-ins, document readers, and free mobile applications related to personal communications. *However, the exports could proceed provided the products are available at no cost to the user.*³² On May 30, 2013, the Treasury Department further amended its policies to allow for the sale, on a cash basis

³¹ Rhoads, Christopher. “Iran’s Web Spying Aided by Western Technology.” Wall Street Journal, June 22, 2009.

³² Fact Sheet: Treasury Issues Interpretive Guidance and Statement of Licensing Policy on Internet Freedom in Iran, March 20, 2012.

(no U.S. financing), to Iran of equipment (ex. cellphones, laptops, satellite Internet, website hosting, and related products and services) that helps Iranians communicate.

Executive Order 13606

On April 23, 2012, President Obama issued an executive order (13606) directly addressing the issue by sanctioning persons who commit “Grave Human Rights Abuses by the Governments of Iran and Syria Via Information Technology (GHRVITY).” The order blocks the U.S.-based property and essentially bars U.S. entry and bans any U.S. trade with persons and entities listed in an Annex and persons or entities subsequently determined to be:

- Operating any technology that allows the Iranian (or Syrian) government to disrupt, monitor, or track computer usage by citizens of those countries or assisting the two governments in such disruptions or monitoring.
- Selling to Iran or Syria any technology that enables those governments to carry out such disruptions or monitoring.

Implementation

The Order named as violators and imposed sanctions on Iran’s Ministry of Intelligence and Security (MOIS); the Islamic Revolutionary Guard Corps (IRGC); the Law Enforcement Forces (LEF); and Iranian Internet service provider Datak Telecom.³³ Several of these entities had previously been sanctioned under other Executive Orders discussed above.

Iran Threat Reduction Act Provisions (P.L. 112-158) and Executive Order 13628

Section 403 of P.L. 112-158 codifies Executive Order 13606 by imposing those same sanctions (visa ban, U.S.-based property blocked) on persons/firms determined to have engaged in censorship in Iran, limited access to media, or—for example a foreign satellite service provider—supported Iranian government jamming or frequency manipulation.

Executive Order 13628 of October 9, 2012, implements the P.L. 112-158 provision by blocking the property of persons/firms determined to have committed the censorship, limitation of free expression, or assistance in jamming stipulated by P.L. 112-158. The Order also specifies the authorities of the Department of State and the Department of the Treasury to impose sanctions.

Implementation

Various entities have been designated under Executive Order 13628 on November 8, 2012,³⁴ and since, as shown in the tables at the end of the paper.

³³ Department of Treasury Documents. Fact Sheet: New Executive Order Targeting Human Rights Abuses Via Information Technology. April 23, 2012.

³⁴ <http://www.state.gov/r/pa/prs/ps/2012/11/200338.htm>.

Measures to Sanction Human Rights Abuses and Promote the Opposition

Another part of the effort to help Iran's opposition has been legislation to sanction regime officials involved in suppressing the domestic opposition in Iran.

Section 105 of CISADA and Executive Order 13553

A Senate bill, S. 3022, the Iran Human Rights Sanctions Act, was incorporated into CISADA as Section 105. The section bans travel and freezing assets of those Iranians determined to be human rights abusers. On September 29, 2010, pursuant to Section 105, President Obama signed an executive order (13553) providing for the CISADA sanctions against Iranians determined to be responsible for or complicit in post-2009 Iran election human rights abuses.

Provisions Added by P.L. 112-158: Sanctioning Sales of Anti-Riot Equipment

Section 402 of the Iran Threat Reduction and Syria Human Rights Act of 2012 (P.L. 112-158) amended Section 105 by adding provisions that sanctions (visa ban, U.S. property blocked) for any person or company that sells the Iranian government goods or technologies that it can use to commit human rights abuses against its people. Such goods include firearms, rubber bullets, police batons, chemical or pepper sprays, stun grenades, tear gas, water cannons, and like goods. Under that section, ISA sanctions are additionally to be imposed on any person determined to be selling such equipment to the IRGC.

Implementation

When Executive Order 13553 was issued, an initial group of eight Iranian officials was penalized, including Mohammad Ali Jafari, the commander-in-chief of the IRGC and other officials who were in key security or judicial positions at the time of the June 2009 election. Additional officials and security force entities have been sanctioned since, as shown in **Table 6**. Under State Department interpretations of the Executive Order, if an entity is designated, all members of that entity are ineligible for visas to enter the United States.³⁵ Similar sanctions against many of these same officials—as well as several others—have been imposed by the European Union.

FY2013 National Defense Authorization Act: Sanctioning Iranian Broadcasting and Profiteers

P.L. 112-239, the FY2013 National Defense Authorization Act, has several human rights provisions. Section 1248 mandates inclusion of the Islamic Republic of Iran Broadcasting (IRIB), the state broadcasting umbrella group, as a human rights abuser, subjecting IRIB to sanctions under Section 105 of CISADA.

³⁵ U.S. Department of the Treasury, Office of Public Affairs. Treasury Sanctions Iranian Security Forces for Human Rights Abuses, June 9, 2011.

Section 1249 amends CISADA by making sanctionable under Section 105 of that law any person determined to have engaged in corruption or to have diverted or misappropriated humanitarian goods or funds for such goods for the Iranian people. The measure is intended to sanction Iranian profiteers who are, for example, using official connections to corner the market for vital medicines.

Separate Visa Ban

On July 8, 2011, in conjunction with Britain, the United States imposed visa restrictions on more than 50 Iranian officials for participating in political repression in Iran. The State Department announcement stated that the names of those subject to the ban would not be released because visa records are confidential. The action was taken under the authorities of Section 212(a)(3)(C) of the Immigration and Nationality Act, which renders inadmissible to the United States a foreign person whose activities could have serious consequences for the United States.

There are certain exemptions in the case of high level Iranian visits to attend the United Nations. Under the U.N. Participation Act (P.L. 79-264) that provides for U.S. participation in the United Nations and as host nation of U.N. headquarters in New York, visas are routinely issued to heads of state and members of their entourage attending these meetings. In September 2012, however, the State Department refused visas for 20 members of Iranian President Ahmadinejad's traveling party on the grounds of past involvement in terrorism or human rights abuses. Still, in line with U.S. obligations under the act, Ahmadinejad was allowed to fly to the United States on Iran Air, even though Iran Air is a U.S.-sanctioned entity, and his plane reportedly was allowed to stay at Andrews Air Force base for the duration of his visit.

Sanctioning Iranian Involvement in the Region

Some sanctions have been imposed to try to punish Iran's attempts to exert influence in the region.

Executive Order 13438

On July 7, 2007, President Bush issued Executive Order 13438. The order sanctions Iranian persons who are posing a threat to Iraqi stability, presumably by providing arms or funds to Shiite militias there.

Implementation

As shown in the tables at the end of this paper, some persons sanctioned under the Order have been Qods Force officers, some have been Iraqi Shiite militia-linked figures, and some entities have been sanctioned as well.

Executive Order 13572

Executive Order 13572, issued on April 29, 2011, targets those responsible for human rights abuses and repression of the Syrian people.

Implementation

The Qods Force and a number of Iranian Qods Force officers, including its overall commander Qasem Soleimani, have been sanctioned under this Order (and under related Executive Orders, as shown in the tables at the end of this paper). The Iranians sanctioned allegedly helped Syria commit abuses against protesters and repress its domestic opposition. In September 2011, the European Union similarly sanctioned the Qods Force for its purported assistance to Syria's repression.

Blocked Iranian Property and Assets

Iranian leaders continue to assert that the United States is holding Iranian assets, and that this is an impediment to improved relations. A U.S.-Iran Claims Tribunal at the Hague continues to arbitrate cases resulting from the 1980 break in relations and freezing of some of Iran's assets. Major cases yet to be decided center on hundreds of Foreign Military Sales (FMS) cases between the United States and the shah's regime, which Iran claims it paid for but were unfulfilled. A reported \$400 million in proceeds from the resale of that equipment was placed in a DOD FMS account and may remain in this escrow account, although DoD has not provided CRS with a precise balance. Additionally, according to the Treasury Department "Terrorist Assets report" for 2010, about \$48 million in Iranian diplomatic property and accounts remains blocked—this amount includes proceeds from rents received on the former Iranian embassy in Washington, DC, and 10 other properties in several states, along with 6 related bank accounts.³⁶

Other past disputes include the mistaken U.S. shoot-down on July 3, 1988, of an Iranian Airbus passenger jet (Iran Air flight 655), for which the United States paid Iran \$61.8 million in compensation (\$300,000 per wage earning victim, \$150,000 per nonwage earner) for the 248 Iranians killed. The United States did not compensate Iran for the airplane itself, although officials involved in the negotiations told CRS in November 2012 that the United States later provided a substitute, used aircraft to Iran.

In another case, there are reportedly about \$2 billion in securities-related assets held by Citigroup, deposited there by Luxembourg-based Clearstream Banking SA, a payments-clearing organization. The assets reputedly belong to Iran and have been frozen and held against terrorism judgments against Iran, although it is not clear whether such assets fall under existing authorities to impound Iranian assets to pay terrorism or other judgments against Iran. Iran's Central Bank reportedly plans to file a motion in U.S. court to unfreeze the assets. Pending legislation in the 112th Congress, discussed below, would consider those assets to be Iranian assets subject to seizure and use to pay judgments against Iran in various terrorism-related cases. In a recent judgement, on July 6, 2012, a U.S. federal judge ordered Iran to pay \$813 million to the families of the 241 U.S. soldiers killed in the October 23, 1983, bombing of the U.S. Marine barracks in Beirut. That brings to \$8.8 billion the total amount awarded, in eight judgments against Iran, for that bombing, which was perpetrated by Islamist elements that formed Lebanese Hezbollah.

³⁶ <http://www.treasury.gov/resource-center/sanctions/Documents/tar2010.pdf>.

U.N. Sanctions

U.N. sanctions apply to all U.N. member states, and therefore have tended, in other cases, to be more effective than unilateral sanctions. There is increasing convergence among all these varying sets of sanctions. As part of a multilateral process of attempting to convince Iran to choose the path of negotiations or face further penalty, during 2006-2008, three U.N. Security Council resolutions—1737, 1747, and 1803—imposed sanctions primarily on Iran’s weapons of mass destruction (WMD) infrastructure. Resolution 1929 was adopted on June 9, 2010, by a vote of 12-2 (Turkey and Brazil), with one abstention (Lebanon). (Iranian entities and persons under U.N. sanctions are in **Table 6.**) A summary of the major provisions of the all four of these resolutions is contained in the table below.³⁷

Table 1. Summary of Provisions of U.N. Resolutions on Iran Nuclear Program (1737, 1747, 1803, and 1929)

Freeze the assets of over 80 named Iranian persons and entities named in annexes to the Resolutions, and require that countries ban the travel of named Iranians. (all four resolutions collectively)
Prohibit transfer to Iran of nuclear, missile, and dual use items to Iran, except for use in light-water reactors
Prohibit Iran from exporting arms or WMD-useful technology (1747)
Prohibit Iran from investing abroad in uranium mining, related nuclear technologies or nuclear capable ballistic missile technology (1929)
Require Iran to suspend uranium enrichment, and to refrain from any development of ballistic missiles that are nuclear capable (1929)
Mandates that countries not export major combat systems to Iran, but does not bar sales of missiles that are not on the U.N. Registry of Conventional Arms. (1929)
Calls for “vigilance” (voluntary restraint) with respect to all Iranian banks, particularly Bank Melli and Bank Saderat.
Calls for vigilance on international lending to Iran and providing trade credits and other financing (1929).
Calls on countries to inspect cargoes carried by Iran Air Cargo and Islamic Republic of Iran Shipping Lines—or by any ships in national or international waters—if there are indications they carry cargo banned for carriage to Iran. Searches in international waters would require concurrence of the country where the ship is registered. (1929)
A Sanctions Committee, composed of the 15 members of the Security Council, monitors implementation of all Iran sanctions and collects and disseminates information on Iranian violations and other entities involved in banned activities. A “panel of experts” is empowered by 1929 to assist the U.N. sanctions committee in implementing the Resolution and previous Iran resolutions, and to suggest ways of more effective implementation.

International Implementation and Compliance³⁸

Since 2010, converging international views on Iran have produced an unprecedented degree of global cooperation in pressuring Iran with sanctions. Increasingly, even Iran's neighbors—always reluctant to antagonize Iran—are joining the effort. Some European and Asian countries have joined the burgeoning sanctions regime not necessarily out of belief in sanctions' efficacy but rather as a means of perhaps heading off unwanted military action by the United States or Israel against Iran's nuclear facilities. A comparison between U.S., U.N., and EU sanctions against Iran is contained in **Table 3** below. To increase international compliance with all applicable sanctions, on May 1, 2012, President Obama issued an Executive Order (13608) giving the Treasury Department the ability to identify and sanction (cutting them off from the U.S. market) foreign persons who help Iran or Syria evade U.S. and multilateral sanctions.

The United States and its partners have also sought to stop Iran from using traditional trading patterns common to its neighborhood to evade sanctions. On January 10, 2013, the Treasury Department's Office of Foreign Assets Control issued an Advisory to highlight Iran's use of *hawalas* (traditional informal banking and money exchanges) in the Middle East and South Asia region to circumvent the sanctions against financial transactions with Iran. U.S. and other banks sometimes process transactions with the *hawalas* that involve Iranian entities because the *hawalas* are able to conceal the Iranian involvement. Press reports indicate that Iran has also attempted to set up front companies in Europe, UAE, and elsewhere to try to buy banned technology or sell more oil. Iran's use of these and other evasion methods are discussed further in the sections below.

Europe

U.S. and European approaches have converged on Iran since 2002, when the nuclear issue came to the fore. Previously, European and other countries had appeared less concerned than is the United States about Iran's support for militant movements in the Middle East or Iran's strategic power in the Persian Gulf and were reluctant to sanction Iran. Since the passage of Resolution 1929 in June 2010, European Union (EU) sanctions on Iran have become nearly as extensive as those of the United States. On November 21, 2011, Britain and Canada announced they would no longer do business with Iran's financial institutions, including Iran's Central Bank. Eight days later, apparently in response, pro-government students backed by regime security forces overran the British Embassy in Tehran. That attack prompted Britain to give all Iranian diplomats 48 hours to leave Britain. Canada closed its embassy in Tehran in September 2012.

Europe has offered some opportunity for illicit Iranian commerce. The Islamic Republic of Iran Shipping Lines (IRISL) has reportedly sought to use the port facilities of Malta and Hamburg, Germany in support of proliferation activities. The U.N. panel of experts reportedly has determined that sales of alumina to Iran by Swiss commodities firms Glencore Xstrata and Tafigura could have violated U.N. sanctions on Iran. The panel of experts report also purportedly

³⁸ Note: CRS has no mandate or capability to "judge" compliance of any country with U.S., multilateral, or international sanctions against Iran. This section is intended to analyze some major trends in third country cooperation with U.S. policy toward Iran. These assessments bear in mind that there are many other issues and considerations in U.S. relations with the countries discussed here.

listed other ongoing potential sanctions violations including export of machine tools to Iran by Spain and satellite equipment sales to Iran by Germany.³⁹

Oil Embargo. In joining U.S. efforts to cut Iran's oil export lifeline, on January 23, 2012, the EU decided to:

- Refrain from new contracts to purchase Iranian oil and to wind down existing contracts by July 1, 2012, after which all EU purchases of Iranian oil were to cease. Collectively, the EU bought about 600,000 barrels per day of Iranian oil in 2011, about a quarter of Iran's total oil exports. The embargo was imposed despite the fact that the most vulnerable EU economies Spain, Italy, and Greece were each buying more than 10% of their oil from Iran. Britain and Germany only got about 1% of their oil from Iran, and France about 4%.
- Ban insurance for shipping oil or petrochemicals from Iran. Even before this took full effect on July 1, 2012, some EU-based insurers closed their offices in Iran.
- Stop all trade with Iran in gold, precious metals, diamonds, and petrochemical products.
- Freeze the assets of Iran's Central Bank, although transactions would still be permitted for approved legitimate trade.
- Freeze the assets of several Iranian firms involved in shipping arms to Syria or which support shipping by IRISL, and cease doing business with port operator Tidewater (see above).

As a consequence of the EU decision, as noted above, ten EU countries have been granted exemptions from sanctions under the FY2012 National Defense Authorization Act (P.L. 112-81) discussed above. Even though the EU countries have adopted the oil embargo, some EU countries criticize aspects of the U.S. sanctions against Iran's Central Bank as a de-facto ban on all civilian trade with Iran, such as in automobiles. This is because financing is often needed to facilitate trade, and blocking financing and payments mechanisms limits the capability to trade with Iran.

SWIFT Cutoff. As of March 17, 2012, based on an EU decision, the Belgium-based SWIFT organization (Society for Worldwide International Financial Transfers) has ended transactions with Iranian banks blacklisted by the EU (about 18 Iranian banks that meet that criteria are members of the network). However, some experts report that Iranian banks are still able to conduct transactions with the European Central Bank via an electronic payments system called "Target II."

Additional EU Sanctions Adopted October 15, 2012. In response to a lack of progress in nuclear negotiations with Iran, the EU adopted the following additional measures:

- A ban on transactions between European and all Iranian banks, unless specifically authorized.
- A ban on provision of short-term export credits, guarantees, and insurance.

³⁹ Louis Charbonneau and Michelle Nichols. "Exclusive: Glencore, Trafigura Deals with Iran May Have Skirted Sanctions—U.N." Reuters, May 22, 2013.

- A ban on imports of natural gas from Iran. Although Iran gas export volumes went mainly to Bulgaria and Greece, via Turkey, this sanction was intended to stall Iran’s attempt to expand gas exports to Europe.
- A ban on exports of graphite, semi-finished metals such as aluminum and steel, and industrial software.
- A ban on providing shipbuilding technology, oil storage capabilities, and flagging or classification services for Iranian tankers and cargo vessels.

In late April 2013, the British government denied permission to Royal Dutch Shell to settle a \$2.3 billion payment to Iran for past oil purchases by funding shipments to Iran of an equivalent value of foodstuffs and medicines. It was not clear on what basis the British government denied the exchange, because the oil was purchased well before the EU oil import ban was imposed, and food and medical sales to Iran are permissible under U.N. and EU sanctions provisions.

The U.S.-European consensus on Iran sanctions differs from early periods. During 2002-2005, there were active negotiations between the European Union and Iran on a “Trade and Cooperation Agreement” (TCA). Such an agreement would have lowered the tariffs or increased quotas for Iranian exports to the EU countries.⁴⁰ However, negotiations were discontinued after the Iran, in late 2005, abrogated an agreement to suspend uranium enrichment. Similarly, there is insufficient international support to grant Iran membership in the World Trade Organization (WTO) until there is major progress on the nuclear issue. Iran first attempted to apply to join the WTO in July 1996, but U.S. Administrations blocked Iran from applying until May 2005, when the United States dropped its objections and Iran began accession talks.

During the 1990s, EU countries maintained a policy of “critical dialogue” with Iran, and the EU and Japan refused to join the 1995 U.S. trade and investment ban on Iran. The European dialogue with Iran was suspended in April 1997 in response to the German terrorism trial (“Mykonos trial”) that found high-level Iranian involvement in killing Iranian dissidents in Germany, but resumed in May 1998 during Mohammad Khatemi’s presidency of Iran. In the 1990s, European and Japanese creditors—over U.S. objections—rescheduled about \$16 billion in Iranian debt. These countries (governments and private creditors) rescheduled the debt bilaterally, in spite of Paris Club rules that call for multilateral rescheduling. In July 2002, Iran tapped international capital markets for the first time since the Islamic revolution, selling \$500 million in bonds to European banks.

⁴⁰ During the active period of talks, which began in December 2002, there were working groups focused not only on the TCA terms and proliferation issues but also on Iran’s human rights record, Iran’s efforts to derail the Middle East peace process, Iranian-sponsored terrorism, counter-narcotics, refugees, migration issues, and the Iranian opposition PMOI.

Table 2. Top Energy Buyers From Iran and Reductions
(amounts in barrels per day, bpd)

Country/Bloc	2011 Average	Current Average
European Union (particularly Italy, Spain, and Greece)	600,000	Negligible
China	550,000	435,000
Japan	325,000	180,000
India	320,000	225,000
South Korea	230,000	165,000
Turkey	200,000	140,000
South Africa	80,000	0
Malaysia	55,000	15,000
Sri Lanka	35,000	15,000
Taiwan	35,000	15,000
Singapore	20,000	15,000
Other	55,000	35,000
Total	2.5 mbd	1.24 mbd

Source: International Energy Agency and rough estimates based on CRS conversations with foreign diplomats and press reports. Actual volumes might differ and import volumes may fluctuate dramatically over short periods of time as actual tanker deliveries occur.

Japan and Korean Peninsula

Japan and South Korea have joined the international coalition that is pressuring Iran, at least in part to avoid friction with their close ally, the United States. In September 2010, Japan and South Korea announced trade, banking, and energy Iran sanctions similar to those of the EU. On December 16, 2011, South Korea banned sales to Iran of energy sector equipment. Both countries have reduced oil imports from Iran and, as a result, both have been issued sanctions exemptions (and subsequent renewals of those exemptions) under P.L. 112-81. Both countries were concerned about the effects of the EU ban on insuring ships carrying Iranian oil, but they worked around that by setting up new insurance mechanisms. As a result, both continue to import Iranian oil, but at levels far below those of 2011.

The requirement that oil buyers pay Iran in local accounts to avoid U.S. sanctions—a requirement that took effect on February 6, 2013—is not likely to affect Japan and South Korea’s trading patterns with Iran significantly. South Korea pays Iran’s Central Bank through local currency accounts at its Industrial Bank of Korea and Woori Bank, and its main exports to Iran have been iron and steel, as well as consumer electronics and appliances made by companies such as Samsung and LG. Japan exports to Iran significant amounts of chemical and rubber products, as well as consumer electronics. These exports are likely to continue at or close to prior levels using local currency accounts.

North Korea

South Korea is an ally of the United States. North Korea is an ally of Iran and, like Iran, is a subject of international sanctions. North Korea generally does not comply with international

sanctions against Iran, and reportedly cooperates with Iran on a wide range of WMD-related ventures. Press reports in April 2013 said that Iran may begin supplying oil to North Korea, although financial terms are not known. Nor is it known if deliveries have begun.

India

India is implementing U.N. sanctions against Iran but its cultural, economic, and historic ties—as well as its strategic need for access to Afghanistan—have made India hesitant to adopt all aspects of U.S. and EU sanctions on Iran. India began reducing economic ties to Iran in 2010 when its central bank ceased using a Tehran-based regional body, the Asian Clearing Union, to handle transactions with Iran. India and Iran agreed to the alternative use of an Iranian bank, Europaisch-Iranische Handelsbank (EIH), to clear the payments, but the two countries turned to Turkey’s Halkbank instead in May 2011 when the EU blacklisted EIH. The U.S. law sanctioning dealings with Iran’s Central Bank (Section 1245 of P.L. 112-81) led Halkbank in January 2012 to withdraw from the arrangement, and the foreign currency account was subsequently handled by UCO Bank in India. The hard currency account at UCO Bank reportedly was exhausted in March 2013.

India took advantage of the payments difficulties by obtaining Iran’s agreement in March 2012 to accept payment for about 45% of the oil sales in rupees, India’s local currency, which is not convertible. Rupee accounts facilitate the settlement of payments for oil in the form of barter trade, such as sales to Iran by Indian companies of wheat, pharmaceuticals, rice, sugar, soybeans, and other products. The February 6, 2013, requirement that Iran be paid in local accounts therefore might not affect India-Iran trade substantially.

India also has reduced its dependence on and imports of Iranian oil substantially. Since 2008, India has reduced its imports of Iranian oil by volume and as a percentage of India’s total oil imports, to the point where, by the end of 2012, Iran was only supplying about 10% of India’s oil imports, down from over 16% in 2008. Despite requiring significant investment to switch over refineries that handle Iranian crude, India cut Iranian imports to an average of about 265,000 bpd from March 2012 to March 2013, a 27% cut over a one year period that was at least as steep as the cuts pledged by Indian officials. India has received and maintained an exemption from P.L. 112-81 in June 11, 2012 and December 7, 2012. Based on these reductions, Under Secretary of State for Political Affairs Wendy Sherman said on May 24, 2013, during a visit to India, that India had made “tremendous progress” reducing imports of oil from Iran.” The statement appeared to foreshadow a renewal of India’s P.L. 112-81 exemption in June 2013.

India also has dissociated itself from an Iran-Pakistan gas pipeline project discussed below. India pulled out of the project in 2009 over concerns about the security of the pipeline, the location at which the gas would be transferred to India, pricing of the gas, and tariffs. During economic talks in early July 2010, Iranian and Indian officials reportedly raised the issue of constructing an underwater natural gas pipeline, which would avoid going through Pakistani territory. However, such a route would be much more expensive to construct than would be an overland route. Indian officials add that some of their major companies, including the Tata conglomerate, have ended or reduced their business with Iran.

Pakistan

A test of Pakistan’s compliance with sanctions is a pipeline project intended to carry Iranian gas to Pakistan. Agreement on the \$7 billion project was finalized on June 12, 2010 and construction

was formally inaugurated formally in a ceremony attended by the presidents of both countries on March 11, 2013. With an intended completion date of mid-2014, Iran reportedly has already completed the pipeline on its side of the border. Potentially complicating the construction on the Pakistani side of the border is that Pakistan has had difficulty arranging about \$1 billion in financing for the project. The day of the ceremony, the State Department expressed serious concerns about the project, building on prior comments during the Bush and Obama Administrations that the project might be sanctioned under the Iran Sanctions Act.

China and Russia

The position of Russia and China, two permanent members of the U.N. Security Council, is that they will impose only those sanctions specifically required by U.N. Security Council resolutions. Russia is an oil exporter itself and a need to preserve oil imports from Iran is therefore not a factor in its Iran policy calculations. However, Russia has earned hard currency from large projects in Iran, such as the Bushehr nuclear reactor, and it also seeks not to provoke Iran into supporting Islamist movements in the Muslim regions of Russia and the Central Asian states.

China has been of concern to U.S. officials because it is Iran's largest oil customer, and therefore its cooperation is pivotal to U.S. strategy of reducing Iran's revenue from oil sales. U.S.-China negotiations in mid-2012 led to an agreement for China to cut Iranian oil purchases by about 18% from its 2011 average of about 550,000 barrels per day to about 450,000 barrels per day. U.S. officials testified (Undersecretary of State Wendy Sherman and Undersecretary of the Treasury David Cohen before the House Foreign Affairs Committee and Senate Foreign Relations Committee) on May 15, 2013, that China had cut its buys of oil from Iran by 21% from 2011 2012 (to about 435,000 barrels per day). They added, because China is the largest buyer of Iranian oil, percentage cuts by China have a large impact in reducing Iran's oil sales by volume. China received a P.L. 112-81 sanctions exemption on June 28, 2012, which was renewed on December 7, 2012. Administration officials have said they also do not see a large move by Chinese firms to "backfill" Iran energy projects that Western majors have abandoned; China has put most of its investments in Iran's energy sector "on hold."

Well before the February 6, 2013, U.S. requirement that Iran be paid in local accounts, China had begun to settle its trade balance with Iran with additional Chinese exports of goods. As an example, two Chinese companies, Geelran and Chery, reportedly are increasing their production of cars in Iran, although Iranian buyers consider them inferior to European or other Asian brands. The February 6, 2013, requirement could mean that Iran will need to purchase even more of its imports from China.

A more significant concern is that China may be refusing or failing to prevent Iran from acquiring weapons and WMD technology. Then Secretary of State Clinton singled out China on January 19, 2011, as not enforcing all aspects of international sanctions that bar sales of most nuclear-related equipment to Iran. A press report of February 14, 2013, (*Washington Post*), stated that Iran had attempted to order sophisticated material for centrifuges from China, although it is not clear that the attempted buy was completed.

Turkey/South Caucasus

Turkey is a significant buyer of Iranian oil; in 2011, it averaged nearly 200,000 bpd. In March 2012, Turkey said it would cut its buys from Iran by 10%-20% and Turkey received a P.L. 112-81

sanctions exemption on June 11, 2012, renewed on December 7, 2012. Some press reports have accused Turkey's Halkbank of settling much of Turkey's payments to Iran for oil or natural gas with shipments to Iran of gold. That form of payment by Turkey is sanctionable under Executive Order 13622 (see above) and will also be sanctionable as of July 1, 2013, under P.L. 112-239. No U.S. sanctions have been imposed on any Turkish firms under Executive Order 135622 and U.S. officials testified on May 15, 2013, that Turkey is not paying for its gas imports from Iran with gold. Undersecretary of the Treasury Cohen testified that there is gold going from Turkey to Iran but it is mostly accounted for by Iranian private citizens' purchases of gold in Turkey to insulate themselves from the declining value of the rial.

Turkey buys natural gas from Iran via a pipeline built in 1997. Turkey is Iran's main gas customer because Iran has not developed a liquefied natural gas (LNG) export capability. During the pipeline's construction, the State Department testified that Turkey would be importing gas originating in Turkmenistan, not Iran, under a swap arrangement, and the State Department did not determine that the project was a violation of ISA. In 2001, direct Iranian gas exports to Turkey through the line began, but still no ISA sanctions were imposed. Many experts assert that the State Department views the line as crucial to the energy security of Turkey, a key U.S. ally. Prior to the EU decision on October 15, 2012, to bar sales of Iranian gas to Europe, Turkey was also the main conduit for Iranian gas exports to Europe (primarily Bulgaria and Greece). Turkey said in December 2012 that it is constructing a second Iran-Turkey gas pipeline (the work is being performed by Som Petrol). No determination of sanctions violation has been announced.⁴¹

Turkey has, on several occasions, blocked or impounded Iranian arms and other contraband shipments bound for Syria or Lebanese Hezbollah. This was discussed in the June 12, 2012, report on sanctions implementation by the U.N. panel of experts chartered by Resolution 1929.

South Caucasus: Azerbaijan and Armenia

The Clinton and George W. Bush Administrations used the threat of ISA sanctions to deter oil pipeline routes involving Iran and thereby successfully promoted an alternate route from Azerbaijan (Baku) to Turkey (Ceyhan). The route became operational in 2005. Section 6 of Executive Order 13622 exempts from sanctions under Section 5 of the order any pipelines that bring gas from Azerbaijan to Europe and Turkey.

In May 2009, Iran and Armenia inaugurated a natural gas pipeline between the two, built by Gazprom of Russia. Armenia is Iran's other main gas customer, aside from Turkey. No determination of sanctionability has been announced. Armenia has said its banking controls are strong and that Iran is unable to process transactions illicitly through Armenia's banks.⁴²

Persian Gulf and Iraq

The Persian Gulf countries are oil exporters and close allies of the United States. Their cooperation with Iran sanctions is judged largely by the degree to which they are compensating for reductions in other countries' purchases of oil from Iran. Those Gulf states with spare capacity, particularly Saudi Arabia, have been willing to fully supply the market, which has

⁴¹ Information provided to the author by the New York State government. July 2012.

⁴² Louis Charbonneau. "Iran Looks to Armenia to Skirt Banking Sanctions." *Reuters*, August 21, 2012.

helped keep world prices steady despite the drop in Iranian oil exports. The Gulf states also have generally sought to prevent the reexportation to Iran of U.S. technology, and curtailed banking relationships with Iran. On the other hand, in order not to antagonize Iran, some oil refiners in the Gulf are selling Iran gasoline, Gulf-based shipping companies such as United Arab Shipping Company are paying port loading fees to such IRGC-controlled port operators as Tidewater,⁴³ and the Gulf countries generally allow sanctioned Iranian banks to continue operating in the Gulf states. CRS Report RL32048, *Iran: U.S. Concerns and Policy Responses*, by Kenneth Katzman, discusses the relations between Iran and other Middle Eastern states.

The UAE is particularly closely watched by U.S. officials because of its historic extensive business dealings with Iran. U.S. officials offered substantial praise for the decision announced March 1, 2012, by Dubai-based Noor Islamic Bank to end transactions with Iran. Iran reportedly used the bank to process a substantial portion of its oil payments. UAE representatives say that Iranian banks still operating in UAE conduct transactions only in cash, rendering them inactive. On the other hand, some Iranian oil reportedly is imported by Emirates National Oil Company and refined into jet fuel for use at UAE's expanding airports. The UAE does not have an exemption from U.S. sanctions, under P.L. 112-81, to purchase Iranian crude oil.

Iran and Kuwait have held talks on the construction of a 350-mile pipeline that would bring Iranian gas to Kuwait. The two sides have apparently reached agreement on volumes (8.5 million cubic meters of gas would go to Kuwait each day) but not on price.⁴⁴ There are also discussions reported between Iran and Iraq on constructing pipelines to facilitate oil and gas swaps between the two. No firm movement on any of these projects is evident.

Iran has sought to use its close relations with Iraq to evade banking and energy sanctions. As noted above, the United States has sanctioned an Iraqi bank that has cooperated with Iran's efforts, and then lifted those sanctions when the bank reduced its exposure to the Iranian financial sector. The United States has pressed Iraq to inspect flights from Iran to Syria to enforce cooperation with U.N. sanctions that ban Iran from exporting arms.

Afghanistan

Some reports say that Iranian currency traders are using Afghanistan to acquire dollars that are in short supply in Iran. In Afghanistan, where donor spending is high, the dollar operates as a second national currency. Iranian traders—acting on behalf of wealthy Iranians seeking to preserve the value of their savings—are said to be carrying local currency to Afghanistan to buy up some of the dollars available there. There are also allegations that Iran is using an Iran-owned bank in Afghanistan, Arian Bank, to move funds in and out of Afghanistan. The Treasury Department has warned Afghan traders not to process dollar transactions for Iran. The Special Inspector General for Afghanistan Reconstruction reported in late January 2013 that Afghan security forces might be using some of the U.S. funding for them to purchase fuel from Iran.

⁴³ Mark Wallace. "Closing U.S. Ports to Iran-Tainted Shipping. Op-ed. *Wall Street Journal*, March 15, 2013.

⁴⁴ http://www.kuwaittimes.net/read_news.php?newsid=NDQ0OTY1NTU4; <http://english.farsnews.com/newstext.php?nn=8901181055>.

Latin America

Iran has looked to several Latin American countries, particularly Venezuela, to try to avoid or reduce the effects of international sanctions. For the most part, however, Iran's trade and other business dealings with Latin America remain modest and likely to reduce the effect of sanctions on Iran only marginally. And, Iran has lost a key Latin American ally with the March 2013 death of Venezuelan President Hugo Chavez. As noted earlier and in the tables at the end of the paper, several Venezuelan firms have been sanctioned for dealings with Iran.

Africa

Iran has sought to cultivate relations with some African countries to try to circumvent sanctions. However, African countries have tended to avoid dealings with Iran in order to avoid pressure from the United States. South Africa has ended its buys of Iranian oil. In June 2012, Kenya contracted to buy about 30 million barrels of Iranian oil, but cancelled the contract the following month after the United States warned that going ahead with the purchase could hurt U.S.-Kenya relations. In June 2012, then Representative Howard Berman sent a letter to Tanzania's president warning that Tanzania could face aid cuts or other punishments if it continued to "re-flag" Iranian oil tankers.⁴⁵ Tanzania has re-flagged about 6-10 Iranian tankers. Perhaps fearing similar criticism, in September 2012 Sierra Leone removed nine vessels from its shipping register after determining they belonged to IRISL.

World Bank Loans

The July 27, 2010, EU measures narrowed substantially the prior differences between the EU and the United States over international lending to Iran. As noted above, the United States representative to international financial institutions is required to vote against international lending, but that vote, although weighted, is not sufficient to block international lending. In 1993 the United States voted its 16.5% share of the World Bank against loans to Iran of \$460 million for electricity, health, and irrigation projects, but the loans were approved. To block that lending, the FY1994-FY1996 foreign aid appropriations (P.L. 103-87, P.L. 103-306, and P.L. 104-107) cut the amount appropriated for the U.S. contribution to the bank by the amount of those loans. The legislation contributed to a temporary halt in new bank lending to Iran. (In the 111th Congress, a provision of H.R. 6296—Title VII—cut off U.S. contributions to the World Bank, International Finance Corp., and the Multilateral Investment Guarantee Corp. if the World Bank approves a new Country Assistance Strategy for Iran or makes a loan to Iran.)

During 1999-2005, Iran's moderating image had led the World Bank to consider new loans over U.S. opposition. In May 2000, the United States' allies outvoted the United States to approve \$232 million in loans for health and sewage projects. During April 2003-May 2005, a total of \$725 million in loans were approved for environmental management, housing reform, water and sanitation projects, and land management projects, in addition to \$400 million in loans for earthquake relief.

⁴⁵ "Tanzania Must Stop Re-Flagging Iran Tankers: U.S. Lawmaker." Reuters, June 29, 2012.

Table 3. Comparison Between U.S., U.N., and EU and Allied Country Sanctions

U.S. Sanctions	U.N. Sanctions	Implementation by EU and Some Allied Countries
<p>General Observation: Most sweeping sanctions on Iran of virtually any country in the world</p>	<p>Increasingly sweeping, but still intended to primarily target Iran's nuclear and other WMD programs. No mandatory sanctions on Iran's energy sector.</p>	<p>EU abides by all U.N. sanctions on Iran, and new sanctions imposed by EU countries since July 27, 2010, closely aligns EU sanctions with those of the U.S.</p>
<p>Ban on U.S. Trade with and Investment in Iran:</p> <p>Executive Order 12959 bans (with limited exceptions) U.S. firms from exporting to Iran, importing from Iran, or investing in Iran.</p> <p>There is an exemption for sales to Iran of food and medical products, but no trade financing or financing guarantees are permitted.</p>	<p>U.N. sanctions do not ban civilian trade with Iran or general civilian sector investment in Iran. Nor do U.N. sanctions mandate restrictions on provision of trade financing or financing guarantees by national export credit guarantee agencies.</p>	<p>Japan and South Korean sanctions also increasingly extensive.</p> <p>No general EU ban on trade in civilian goods with Iran but, as a consequence of EU oil embargo from Iran and other decisions, EU sanctions are now nearly as extensive as the United States. All trade credits and credit guarantees now banned as result of October 15, 2012, EU announcement.</p> <p>Japan and South Korea have banned medium- and long-term trade financing and financing guarantees. Short-term credit still allowed.</p>
<p>Sanctions on Foreign Firms that Do Business with Iran's Energy Sector:</p> <p>The Iran Sanctions Act, P.L. 104-172, and subsequent laws and executive orders, discussed throughout the paper, mandate sanctions on virtually any type of transaction with/in Iran's energy sector. Some exemptions are permitted for firms of countries that have "significantly reduced" purchases of Iranian oil each 180 days.</p>	<p>No U.N. equivalent exists. However, preambular language in Resolution 1929 "not[es] the potential connection between Iran's revenues derived from its energy sector and the funding of Iran's proliferation-sensitive nuclear activities." This wording is interpreted by most observers as providing U.N. support for countries who want to ban their companies from investing in Iran's energy sector.</p>	<p>EU now bans almost all dealings with Iran's energy sector, including purchases of Iranian oil and gas, shipping insurance, and sales of energy sector equipment.</p> <p>Japanese and South Korean measures ban new energy projects in Iran and call for restraint on ongoing projects. South Korea in December 2011 cautioned its firms not to sell energy or petrochemical equipment to Iran. Both have cut oil purchases from Iran sharply.</p>
<p>Ban on Foreign Assistance:</p> <p>U.S. foreign assistance to Iran—other than purely humanitarian aid—is banned under §620A of the Foreign Assistance Act, which bans U.S. assistance to countries on the U.S. list of "state sponsors of terrorism." Iran is also routinely denied direct U.S. foreign aid under the annual foreign operations appropriations acts (most recently in §7007 of division H of P.L. 111-8).</p>	<p>No U.N. equivalent</p>	<p>EU measures of July 27, 2010, ban grants, aid, and concessional loans to Iran. Also prohibit financing of enterprises involved in Iran's energy sector.</p> <p>Japan and South Korea measures do not specifically ban aid or lending to Iran, but no such lending by these countries is under way.</p>

U.S. Sanctions	U.N. Sanctions	Implementation by EU and Some Allied Countries
<p>Ban on Arms Exports to Iran:</p> <p>Iran is ineligible for U.S. arms exports under several laws, as discussed in the report.</p>	<p>Resolution 1929 (operative paragraph 8) bans all U.N. member states from selling or supplying to Iran major weapons systems, including tanks, armored vehicles, combat aircraft, warships, and most missile systems, or related spare parts or advisory services for such weapons systems.</p>	<p>EU sanctions include a comprehensive ban on sale to Iran of all types of military equipment, not just major combat systems.</p> <p>No similar Japan and South Korean measures announced, but neither has exported arms to Iran.</p>
<p>Restriction on Exports to Iran of “Dual Use Items”:</p> <p>Primarily under §6(j) of the Export Administration Act (P.L. 96-72) and §38 of the Arms Export Control Act, there is a denial of license applications to sell Iran goods that could have military applications.</p>	<p>The U.N. Resolutions on Iran, cumulatively, ban the export of almost all dual-use items to Iran.</p>	<p>EU bans the sales of dual use items to Iran, in line with U.N. resolutions. Oct. 2012 measures ban graphite and finished metal sales to Iran.</p> <p>Japan announced full adherence to strict export control regimes when evaluating sales to Iran. South Korea has adopted similar policies.</p>
<p>Sanctions Against International Lending to Iran:</p> <p>Under §1621 of the International Financial Institutions Act (P.L. 95-118), U.S. representatives to international financial institutions, such as the World Bank, are required to vote against loans to Iran by those institutions.</p>	<p>Resolution 1747 (oper. paragraph 7) requests, but does not mandate, that countries and international financial institutions refrain from making grants or loans to Iran, except for development and humanitarian purposes.</p>	<p>The July 27, 2010, measures prohibit EU members from providing grants, aid, and concessional loans to Iran, including through international financial institutions.</p> <p>No specific similar Japan or South Korea measures announced.</p>
<p>Sanctions Against Foreign Firms that Sell Weapons of Mass Destruction-Related Technology to Iran:</p> <p>As discussed in this report, several laws and regulations provide for sanctions against entities, Iranian or otherwise, that are determined to be involved in or supplying Iran’s WMD programs (asset freezing, ban on transaction with the entity).</p>	<p>Resolution 1737 (oper. paragraph 12) imposes a worldwide freeze on the assets and property of Iranian entities named in an Annex to the Resolution. Each subsequent Resolution has expanded the list of Iranian entities subject to these sanctions.</p>	<p>The EU measures imposed July 27, 2010, commit the EU to freezing the assets of entities named in the U.N. resolutions, as well as numerous other named Iranian entities.</p> <p>Japan and South Korea froze assets of U.N.-sanctioned entities.</p>
<p>Ban on Transactions with Terrorism Supporting Entities:</p> <p>Executive Order 13224 bans transactions with entities determined by the Administration to be supporting international terrorism. Numerous entities, including some of Iranian origin, have been so designated.</p>	<p>No direct equivalent, but Resolution 1747 (oper. paragraph 5) bans Iran from exporting any arms—a provision widely interpreted as trying to reduce Iran’s material support to groups such as Lebanese Hizbollah, Hamas, Shiite militias in Iraq, and insurgents in Afghanistan.</p>	<p>No direct equivalent, but many of the Iranian entities named as blocked by the EU, Japan, and South Korea overlap or complement Iranian entities named as terrorism supporting by the United States.</p>

U.S. Sanctions	U.N. Sanctions	Implementation by EU and Some Allied Countries
<p>Travel Ban on Named Iranians:</p> <p>CISADA and H.R. 1905 provide for a prohibition on travel to the U.S., blocking of U.S.-based property, and ban on transactions with Iranians determined to be involved in serious human rights abuses against Iranians since the June 12, 2009, presidential election there, or with persons selling Iran equipment to commit such abuses.</p>	<p>Resolution 1803 imposed a binding ban on international travel by several Iranians named in an Annex to the Resolution. Resolution 1929 extended that ban to additional Iranians, and forty Iranians are now subject to the ban. However, the Iranians subject to the travel ban are so subjected because of their involvement in Iran’s WMD programs, not because of involvement in human rights abuses.</p>	<p>The EU sanctions announced July 27, 2010, contains an Annex of named Iranians subject to a ban on travel to the EU countries. An additional 60+ Iranians involved in human rights abuses were subjected to EU sanctions since.</p> <p>Japan and South Korea have announced bans on named Iranians.</p>
<p>Restrictions on Iranian Shipping:</p> <p>Under Executive Order 13382, the U.S. Treasury Department has named Islamic Republic of Iran Shipping Lines and several affiliated entities as entities whose U.S.-based property is to be frozen.</p>	<p>Resolution 1803 and 1929 authorize countries to inspect cargoes carried by Iran Air and Islamic Republic of Iran Shipping Lines (IRISL)—or any ships in national or international waters—if there is an indication that the shipments include goods whose export to Iran is banned.</p>	<p>The EU measures announced July 27, 2010, bans Iran Air Cargo from access to EU airports. The measures also freeze the EU-based assets of IRISL and its affiliates. Insurance and re-insurance for Iranian firms is banned.</p> <p>Japan and South Korean measures took similar actions against IRISL and Iran Air.</p>
<p>Banking Sanctions:</p> <p>During 2006-2011, several Iranian banks have been named as proliferation or terrorism supporting entities under Executive Orders 13382 and 13224, respectively (see Table 6 at end of report).</p> <p>CISADA prohibits banking relationships with U.S. banks for any foreign bank that conducts transactions with Iran’s Revolutionary Guard or with Iranian entities sanctioned under the various U.N. resolutions.</p> <p>FY2012 Defense Authorization (P.L. 112-81) preventing U.S. accounts with foreign banks that process transactions with Iran’s Central Bank (with specified exemptions).</p>	<p>No direct equivalent</p> <p>However, two Iranian banks are named as sanctioned entities under the U.N. Security Council resolutions.</p>	<p>The EU froze Iran Central Bank assets January 23, 2012, and banned all transactions with Iranian banks unless authorized on October 15, 2012. .</p> <p>November 21, 2011: Britain and Canada bar their banks from any transactions with Iran Central Bank.</p> <p>March 2012: Brussels-based SWIFT says expelled sanctioned Iranian banks from the electronic payment transfer system.</p> <p>Japan and South Korea measures similar to the 2010 EU sanctions, with South Korea adhering to the same 40,000 Euro authorization requirement. Japan and S. Korea froze the assets of 15 Iranian banks; South Korea targeted Bank Mellat for freeze.</p>
<p>No direct equivalent, although, as discussed above, U.S. proliferation laws provide for sanctions against foreign entities that help Iran with its nuclear and ballistic missile programs.</p>	<p>Resolution 1929 (oper. paragraph 7) prohibits Iran from acquiring an interest in any country involving uranium mining, production, or use of nuclear materials, or technology related to nuclear-capable ballistic missiles. Paragraph 9 prohibits Iran from undertaking “any activity” related to ballistic missiles capable of delivering a nuclear weapon.</p>	<p>EU measures on July 27, 2010, require adherence to this provision of Resolution 1929.</p>

Private Sector Cooperation and Compliance

The multiplicity of sanctions have caused Iran to be viewed by corporations as a “controversial market”; many firms no longer want to do business there even when doing so is permitted under international sanctions. Many experts believe that, over time, the efficiency and output of Iran’s economy will decline further as foreign expertise departs and Iran attracts alternative investment from less capable foreign companies. On the other hand, travelers to Iran say many foreign products, including U.S. products such as Apple iPhones, are readily available in Iran, suggesting that such products are being reexported to Iran from neighboring countries. Examples of major non-U.S. companies discontinuing business with Iran include the following:

- ABB of Switzerland said in January 2010 it would cease doing business with Iran.
- Siemens of Germany was active in the Iran telecommunications infrastructure market, but announced in February 2010 that it would cease pursuing business in Iran. Finmeccanica, a defense and transportation conglomerate of Italy, followed suit, as did Thyssen-Krupp, a German steelmaker.
- Germany’s Daimler (Mercedes-Benz maker) said in April 2010 it would freeze planned exports to Iran of cars and trucks and Porsche reportedly has suspended its sales in Iran as well. Italian carmaker Fiat reportedly has pulled out of the Iran market.
- Finnish mobile phone maker Nokia reportedly has stopped selling phones in Iran.
- French carmaker Peugeot, which produces cars locally in partnership with Iran’s Khodro Group, has said it suspended operations in Iran as of July 1, 2012. Peugeot is 7% owned by General Motors, but GM is not known to have any involvement in or to supply any GM content to the Peugeot Iran activities.
- In August-September 2010, Japan and South Korea announced that their automakers Toyota, Hyundai, and Kia Motors would cease selling automobiles to Iran. However, it is unclear whether all South Korean car sales to Iran ceased—in June 2012, South Korean trade officials said exports to Iran, including Samsung mobile phones and Hyundai cars, would only be approved if their payment period were 180 days or less. This restriction is to protect against Iranian payments defaults because of the severe economic pressure Iran is under.
- Attorneys for BNP Paribas of France told the author in July 2011 that, as of 2007, the firm was pursuing no new business in Iran, although it was fulfilling existing obligations in that market.
- On June 30, 2011, according to press reports, the Danish shipping giant Maersk told Iran that it would no longer operate out of Iran’s three largest ports. The firm’s decision reportedly was based on the U.S. announcement on June 23, 2011, that it was sanctioning the operator of those ports, Tidewater Middle East Co., as a proliferation entity under Executive Order 13382. The pullout of Maersk will likely further raise shipping costs.

- The State Department reported on September 30, 2010, that Hong Kong company NYK Line Ltd. had ended shipping business with Iran (on any goods).
- Well before Executive Order 13590 was issued (see above), one large oil services firm, Schlumberger, which is incorporated in the Netherlands Antilles, said it would wind down its business with Iran. However, press reports citing company documents say all contracts with Iran might not be terminated until at least 2013.⁴⁶
- As discussed above, Indian firm Tata is ending its business in Iran.

Foreign Subsidiaries of U.S. Firms That Have Exited the Iran Market

Even before their activities became sanctionable as a consequence of post-2010 legislation and executive orders, many foreign subsidiaries of U.S. firms had exited the Iran market voluntarily.

- Chemical manufacturer Huntsman announced in January 2010 its subsidiaries would halt sales to Iran.
- Halliburton. On January 11, 2005, Iran said it had contracted with U.S. company Halliburton, and an Iranian company, Oriental Kish, to drill for gas in Phases 9 and 10 of South Pars. Halliburton reportedly provided \$30 million to \$35 million worth of services per year through Oriental Kish, leaving unclear whether Halliburton would be considered in violation of the U.S. trade and investment ban or the Iran Sanctions Act (ISA),⁴⁷ because the deals involved a subsidiary of Halliburton (Cayman Islands-registered Halliburton Products and Service, Ltd., based in Dubai). On April 10, 2007, Halliburton announced that its subsidiaries were no longer operating in Iran, as promised in January 2005.
- General Electric (GE). The firm announced in February 2005 that it would seek no new business in Iran, and it reportedly wound down preexisting contracts by July 2008. GE was selling Iran equipment and services for hydroelectric, oil and gas services, and medical diagnostic projects through Italian, Canadian, and French subsidiaries.
- On March 1, 2010, Caterpillar Corp. said it had altered its policies to prevent foreign subsidiaries from selling equipment to independent dealers that have been reselling the equipment to Iran.⁴⁸ Ingersoll Rand, maker of air compressors and cooling systems, followed suit.⁴⁹
- In April 2010, it was reported that foreign partners of several U.S. or other multinational accounting firms had cut their ties with Iran, including KPMG of the Netherlands, and local affiliates of U.S. firms PricewaterhouseCoopers and Ernst and Young.⁵⁰

⁴⁶ Stockman, Farah. "Oil Firm Says It Will Withdraw From Iran." *Boston Globe*, November 12, 2010.

⁴⁷ "Iran Says Halliburton Won Drilling Contract." *Washington Times*, January 11, 2005.

⁴⁸ "Caterpillar Says Tightens 'No-Iran' Business Policy." Reuters, March 1, 2010.

⁴⁹ Nixon, Ron. "2 Corporations Say Business With Tehran Will Be Curbed." *New York Times*, March 11, 2010.

⁵⁰ Baker, Peter. "U.S. and Foreign Companies Feeling Pressure to Sever Ties With Iran." *New York Times*, April 24, 2010.

- Oilfield services firm Smith International said on March 1, 2010, it would stop sales to Iran by its subsidiaries. Another oil services firm, Flowserve, said its subsidiaries have voluntarily ceased new business with Iran as of 2006.⁵¹ FMC Technologies took similar action in 2009, as did Weatherford⁵² in 2008.

Foreign Firms Reportedly Remaining in the Iran Market

Still, many major firms continue to run the financial risk of doing business with Iran. Some of the well-known firms that continue to do so include Alcatel-Lucent of France; Bank of Tokyo-Mitsubishi UFJ; Bosch of Germany; Canon of Japan; ING Group of the Netherlands; Mercedes of Germany; Renault of France; Samsung of South Korea; Sony of Japan; Volkswagen of Germany; Volvo of Sweden; and numerous others. Some of the foreign firms that trade with Iran, such as Mitsui and Co. of Japan, Alstom of France, and Schneider Electric of France, are discussed in a March 7, 2010, *New York Times* article on foreign firms that do business with Iran and also receive U.S. contracts or financing. The *Times* article does not claim that these firms have violated any U.S. sanctions laws. Other firms that work in Iran's telecommunications sector are discussed in the section above on sanctions to hinder Iran's ability to monitor the Internet.

Other questions have arisen over how U.S. sanctions might apply to businesses with foreign firms in which Iran might acquire a full or partial interest. Such firms include Daewoo Electronics of South Korea, where an Iranian firm—Entekhab Industrial Corp.—bid to take over that firm. In January 2013, Daewoo was purchased by another South Korean firm, in part because Entekhab could not obtain financing for the deal. Another example is Adabank of Turkey, which reportedly might be sold to Iran.

Foreign Subsidiaries of U.S. Firms Still in the Iran Market

Some foreign subsidiaries of U.S. firms reportedly still trade with Iran. Some of them also received U.S. government contracts, grants, loans, or loan guarantees, according to a March 7, 2010, *New York Times* article. The subsidiaries believed still involved in Iran include

- An Irish subsidiary of the Coca Cola Company, which provides syrup for the U.S.-brand soft drink to an Iranian distributor, Khoshgozar. Local versions of both Coke and of Pepsi (with Iranian-made syrups) are also marketed in Iran by distributors who licensed the recipes for those soft drinks before the Islamic revolution and before the trade ban was imposed on Iran.
- Transammonia Corp. which, via a Swiss-based subsidiary, conducts business with Iran to help it export ammonia, a growth export for Iran.
- Press reports in early October 2011 indicated that subsidiaries of Kansas-based Koch Industries may have sold equipment to Iran to be used in petrochemical plants (making methanol) and possibly oil refineries, among other equipment.

⁵¹ In September 2011, the Commerce Department fined Flowserve \$2.5 million to settle 288 charges of unlicensed exports and reexports of oil industry equipment to Iran, Syria, and other countries.

⁵² Form 10-K for Fiscal year ended December 31, 2008, claims firm directed its subsidiaries to cease new business in Iran and Cuba, Syria, and Sudan as of September 2007.

However, the reports say the sales ended as of 2007, a time at which foreign sales of refinery equipment to Iran were not sanctionable under ISA.⁵³

- Some subsidiaries of U.S. energy equipment and energy-related shipping firms were in the Iranian market as late as 2010, according to their “10-K” filings with the Securities and Exchange Commission. However, most such energy sector-related sales to Iran are now sanctionable and these companies have most likely exited the Iranian market. Those still in the Iran market as of 2010 included Natco Group,⁵⁴ Overseas Shipholding Group,⁵⁵ UOP (United Oil Products, a Honeywell subsidiary based in Britain),⁵⁶ Itron,⁵⁷ Fluor,⁵⁸ Parker Drilling, Vantage Energy Services,⁵⁹ PMFG, Ceradyne, Colfax, Fuel Systems Solutions, General Maritime Company, Ameron International Corporation, and World Fuel Services Corp. UOP reportedly has sold refinery gear to Iran.

Effectiveness of Sanctions on Iran

The effectiveness of U.S. and international sanctions can be assessed according to which goals are being examined. The following sections examine the effectiveness of sanctions according to a variety of criteria.

Effect on Iran’s Nuclear Program Decisions and Capabilities

There is a consensus that U.S. and U.N. sanctions have not, to date, accomplished their core strategic objective of compelling Iran to verifiably limit its nuclear development to purely peaceful purposes. By all accounts—the United States, the P5+1, the United Nations, the International Atomic Energy Agency (IAEA)—Iran has not complied with the applicable provisions of the U.N. Security Council resolutions requiring that outcome.

Five rounds of P5+1—Iran talks during 2012 and thus far in 2013, the latest of which took place in Almaty, Kazakhstan during April 5-6, 2013, have produced no breakthroughs. The talks have centered on P5+1 proposals that Iran suspend enrichment of uranium to the 20% purity level in exchange for a modest easing of international sanctions. The nuclear talks are discussed in greater detail in CRS Report RL32048, *Iran: U.S. Concerns and Policy Responses*, by Kenneth Katzman.

⁵⁹ Form 10-K for Fiscal year ended December 31, 2007.

Counter-Proliferation Effects

A related issue is whether the cumulative sanctions have directly set back Iran's nuclear efforts by making it difficult for Iran to import needed materials or skills. Some U.S. officials have asserted that, coupled with mistakes and difficulties in Iran, sanctions have slowed Iran's nuclear efforts by making it more difficult and costly for Iran to acquire key materials and equipment for its enrichment program.⁶⁰ However, International Atomic Energy Agency (IAEA) reports have said that Iran's capacity to enrich uranium more rapidly continues to expand, as does its stockpile of 20% enriched uranium. And, Director of National Intelligence James Clapper testified on March 12, 2013, that Iran "is expanding the scale, reach, and sophistication of its ballistic missile arsenal.

Effects on Iran's Regional Political and Military Influence

Sanctions do not appear to have reduced Iran's capability to exert influence in the Middle East. Iran continues to finance and provide arms to militant movements in the Middle East and to Syria, according to U.S. officials. Some press reports, quoting the U.N. panel of experts, say Iran has been exporting arms to factions in Yemen and Somalia. Iran's arms exports contravene Resolution 1747, which bans Iran's exportation of arms.⁶¹ These issues are discussed in greater detail in CRS Report RL32048, *Iran: U.S. Concerns and Policy Responses*.

A congressionally-mandated Defense Department report of April 2012 called into question whether sanctions would erode Iran's conventional military capabilities. The report discusses Iran's increasing capabilities in short range ballistic missiles and other weaponry, as well as acquisition of new ships and submarines.⁶² It is not clear if any country violated Resolution 1929 by selling Iran major combat systems, whether such shipments were made before the Resolution took effect in June 2010, or whether Iran made these systems itself. The report also assessed that Iran's continues to develop medium range ballistic missiles, although Iran's development of such systems might not require as much foreign help as do Iran's longer range missile programs. On the other hand, there have been no reported sales of major combat systems in recent years, and military experts argue that Iran's conventional military capability relative to its neighbors or potential adversaries will erode if it is not modernized.

General Political Effects

Some experts assert that sanctions could accomplish their core goals if they spark dissension within the senior Iranian leadership or major public unrest—either of which could cause Iran to assess as too high the costs of rejecting a nuclear agreement with the P5+1. There has been a split since early 2011 between President Ahmadinejad and Supreme Leader Ali Khamene'i, but the rift has been driven primarily by institutional competition and differences over the relative weight to attach to Islam or to Iranian nationalism—not primarily about international sanctions. These tensions escalated as Iran entered its June 14, 2013, presidential election period.

⁶¹ Louis Charbonneau. "U.N. Monitors See Arms Reaching Somalia From Yemen, Iran." Reuters, February 10, 2013.

⁶² Department of Defense. Annual Report of Military Power of Iran. April 2012.

At the popular level, there has been labor and public unrest over escalating food prices and the dramatic fall of the value of Iran's currency. However, public strikes and demonstrations have been sporadic and do not appear to threaten the regime. Without an uprising or the major threat of one, the Iranian leadership is unlikely to feel significant pressure to curb its nuclear program.

Human Rights-Related Effects

U.S. and international sanctions have not, to date, had a measurable effect on human rights practices in Iran. Executions increased significantly in 2012, according to the State Department (human rights report for 2012, released April 19, 2013, but that is likely a result of a continued crackdown against opposition activity stimulated by the 2009 uprising in Iran.

Nor has the regime's ability to monitor and censor use of the Internet and other media been evidently affected to date, even though sanctions have caused several major firms have stop selling Iran equipment that it could use to for those purposes. German telecommunications firm Siemens (accused of selling technology that Iran used to monitor the Internet) announced on January 27, 2010, that it would stop signing new business deals in Iran as of mid-2010.⁶³ A large Chinese firm, Huawei, long accused by activists of selling Iran Internet monitoring or censorship gear, announced in December 2011 that it was no longer seeking new business in Iran and was withdrawing its sales staff. A South African firm, MTN Group, owns 49% of a private cellular phone network, Irancell, and was accused by some groups of helping the Iranian government shut down some social network services during times of protest in Iran.⁶⁴ On August 8, 2012, MTN announced it plans to move its assets out of Iran. On October 11, 2012, Eutelsat, a significant provider of satellite service to Iran's state broadcasting establishment, ended that relationship. The move followed the EU sanctioning in March 2012 of the head of the Islamic Republic of Iran Broadcasting (IRIB) Ezzatollah Zarghami. A GAO report to Congress of February 25, 2013, did not identify any foreign firms that exported technology to Iran for monitoring, filtering, or disrupting information and communications flow from June 2011-December 15, 2012.⁶⁵

Still, several major telecommunications firms are said to still be active in Iran, including Deutsche Telekom, Ericsson, Emirates Telecom, LG Group, NEC Corporation, and Asiasat. In mid-October 2012, Israeli news sources asserted that Sweden opposed additional sanctions against Iran in order to preserve a pending deal for Ericsson to help build a network for Irancell.

Economic Effects

The accumulation of sanctions has taken a dramatic toll on Iran's economy—a trend increasingly admitted by Iranian leaders. On February 24, 2013, Ahmadinejad presented his proposed 2013-2014 budget and said that "This was a very difficult year for our economy."⁶⁶ However, analysis by some U.S. experts, and assertions by some Iranian officials, suggest that Iran may be adjusting

⁶⁵ GAO-13-344R Iran, February 25, 2013.

⁶⁶ <http://www.israelnationalnews.com/news/news.aspx/165555>

to the sanctions and mitigating their economic effects more successfully than has been thought by experts.⁶⁷ Indicators of the effect of sanctions and mismanagement on Iran's economy include:

- *Oil Export Declines.* Oil sales have accounted for about 80% of Iran's hard currency earnings, which are controlled by the government (Central Bank), not the private sector. As noted in the chart above, sanctions have halved Iran's oil sales from the 2.5 mbd of sales in 2011. This drop is expected to deprive the Iranian government of about \$50 billion for all of 2013.
- *Falling Oil Production.* To try to adjust to lost oil sales, Iran has been storing unsold oil on tankers in the Persian Gulf and it is building additional storage tanks on shore. The storage represents an attempt to keep up oil production because shutting down wells risks harming them and it is costly and time consuming to resume production at a shut well. However, that strategy has not succeeded to date because Iran's oil production has fallen to about 2.6 million barrels per day from the level of nearly 4.0 mbd at the end of 2011.⁶⁸
- *GDP Decline.* Sanctions have caused Iran to suffer its first gross domestic product contraction in two decades. An IMF global report issued in late April 2013 said that Iran's economy shrank 1.9% from March 2012-March 2013, and will likely shrink another 1.3% in the subsequent one year period. U.S. officials testified on May 15, 2013, to a larger GDP drop for 2012-2013—on the order of about 5% - 8%. The IMF report predicted the economy would return to growth, at about 1%, for the one year after that (March 2014-March 2015). The recession has elevated the unemployment rate to about 20%, although the Iranian government reports that the rate is 13%. Economists assess that there is a burgeoning number of non-performing loans.
- *Currency Collapse.* The regime has been working to contain the effects of a currency collapse. The value of the rial fell on unofficial markets from about 28,000 to one U.S. dollar to nearly 40,000 to one dollar in early October 2012. Prior to that, the rial's value had fallen from about 13,000 to the dollar in September 2011 to about 28,000 to the dollar as of mid-September 2012. Observers say the unofficial rate is about 37,000 to the dollar in May 2013.
- *Hard Currency Depletion.* The currency collapse has fed analysis that Iran might deplete its hard currency reserves—hard currency is needed to support the value of the rial. The IMF estimated Iran's hard currency reserves to be about \$101 billion as of the end of 2011. Experts estimated the reserves probably fell below \$90 billion at the end of 2012,⁶⁹ but Iran's economics minister told journalists in late April 2013 that the reserves were still approximately \$100 billion. If the minister's statements are accurate, that could call into question analysis by outside experts that Iran's hard currency reserves might be exhausted by July 2014 at current rates of depletion.⁷⁰

⁶⁸ Rick Gladstone. "Data on Iran Dims Outlook for Economy." *New York Times*, October 13, 2012.

⁶⁹ GAO study of February 2013, op.cit. p. 35-6.

⁷⁰ Foundation for the Defense of Democracies conversation with the author. November 16, 2012.

- To try to stretch its hard currency reserve, on October 15, 2012, Iran said it would no longer supply hard currency for purchases of luxury goods such as cars or cellphones (the last 2 of the government's 10 categories of imports, ranked by their importance). The government is still supplying hard currency for essential and other key imports, and importers for such goods have been able to obtain dollars at the official "reference" rate of 12,260 to the dollar. Importers of other key categories of goods have been able to obtain dollars at a rate of 28,500 to the dollar. On April 22, 2013, the regime tried to unify the exchange rates by compelling the importers of essential goods to obtain hard currency at a rate of 24,500 to the dollar, far worse than the previous rate of 12,260.
- *Inflation.* Some Iranians and outside economists worry that hyper-inflation might result from the currency collapse. The late April 2013 government attempt to unify the exchange rate set off a wave of hoarding of key foodstuffs by Iranians who are expecting the prices of those goods to rise sharply. The Iranian Central Bank acknowledged an inflation rate of 31% rate in April 2013—the highest rate ever acknowledged by the Bank. Many economists assert that these official figures understate the actual inflation rate substantially, and that is between 50% and 70%. Some assert that inflation has been fed by the policies of Ahmadinejad, including the substitution of subsidies with cash payments, as well as such allegedly politically-motivated actions such as bonus cash payments to Iranians on the eve of Nowruz 2013 (Persian New Year, March 21 of each year).
- *Industrial Production.* Almost all Iranian factories depend on imports and the currency collapse has made it difficult for Iranian manufacturing to operate. Iran's production of automobiles has fallen by about 40% from 2011 levels. Iran produces cars for the domestic market, such as the Khodro, based on licenses from European auto makers such as Renault and Peugeot.
- *Shipping Difficulties.* Beyond the issue of the cost of imported goods, the Treasury Department's designations of affiliates and ships belong to Islamic Republic of Iran Shipping Lines (IRISL) reportedly are harming Iran's ability to ship goods at all, and have further raised the prices of goods to Iranian import-export dealers. Some ships have been impounded by various countries for nonpayment of debts due on them.
- *Domestic Payments Difficulties.* Suggesting Iran's operating budget is struggling, some reports say the government is in arrears in salary payments to military personnel and other government workers. In order to conserve funds, in late 2012, Iran's parliament—against Ahmadinejad's urgings—postponed phase two of an effort to wean the population off subsidies. That effort provides for cash payments to about 60 million Iranians of about \$40 per month to 60 million Iranians to compensate them for ending subsidies for commodities such as gasoline. Gasoline prices now run on a tiered system in which a small increment is available at the subsidized price of about \$1.60 per gallon, but amounts above that threshold are available only at a price of about \$2.60 per gallon, close to the world price. Before the subsidy phase out, gasoline was sold for about 40 cents per gallon.
- *Flights Curtailed.* Because of the decline in Iran's trade with European countries, KLM and Austria Airlines announced in January 2013 that they would be ending flights to Iran later in 2013. Lufthansa, some other European airlines, and most

airlines in the Persian Gulf, Middle East, and South Asia region still fly to Iran regularly.

Iran's Mitigation Efforts

There is a growing body of opinion and Iranian assertions, cited above, that indicates that Iran, through actions of the government and the private sector, is mitigating the economic effect of sanctions. Some argue that Iran might even benefit from sanctions over the long term by being compelled to diversify its economy and reduce dependence on oil revenues. Iran's 2013-2014 budget relies far less on oil exports than have previous budgets, and its exports of minerals, cement, urea fertilizer, and other agricultural and basic industrial goods are increasing substantially. Iran's economy minister, in April 2013 interviews, said non-oil exports grew 20% in 2012 from the prior year. Iran's goods are relatively less expensive than previously because of the decline in value of its currency. The main customers for these non-oil exports reportedly are countries in the immediate neighborhood, including Iraq, Afghanistan, Azerbaijan, Armenia, and others. Iranian manufacturers have increased production of some goods that Iranians are buying as they cut back on purchases of imported goods. Some Iranian importers of foreign goods have shifted to exporting goods from Iran—benefitting from the fall of the value of Iran's currency. Some private funds are going into the Tehran stock exchange and hard assets, such as property. However, many of these trends generally benefit the urban elite.

Effect on Energy Sector Long-Term Development

The United States and its partners are focused on sanctioning Iran's energy sector because it is still a pillar of Iran's economy. Even before U.N. and multilateral sanctions began to be imposed on Iran in 2006, Iran was having trouble maintaining production at a level of 4 mbd. Without foreign help, Iranian energy firms are unable to derive maximum yield from existing fields or efficiently and effectively develop new fields.

U.S. officials estimated in 2011 said that Iran has lost \$60 billion in investment in the sector as numerous major firms have either announced pullouts from some of their Iran projects, declined to make further investments, or resold their investments to other companies. It is therefore highly unlikely that Iran will attract the \$130 billion - \$145 billion in new investment by 2020 that Iran is estimated to need to keep oil production capacity from falling.⁷¹ Observers at key energy fields in Iran say there is little evidence of foreign investment activity and little new development activity sighted, as discussed in **Table 4**. However, the table also shows that some international firms remain invested in Iran's energy sector. Some of them have not been determined to have violated ISA and may still be under investigation by the State Department. As discussed above, some firms have been sanctioned, and others have avoided sanctions either through Administration waivers or invocation of the "special rule."

Others maintain that Iran's gas sector can compensate for declining oil exports, although Iran has used its gas development primarily to reinject into its oil fields rather than to export. Iran exports about 3.6 trillion cubic feet of gas, primarily to Turkey and Armenia. On the other hand, sanctions have rendered Iran unable to develop a liquefied natural gas (LNG) export business. EU sanctions have also derailed several gas ventures, including BP-NIOC joint venture in the Rhum gas field,

⁷¹ Khajehpour presentation at CSIS. Op. cit.

200 miles off the coast of Scotland, and inclusion of Iran in planned gas pipeline projects to Europe.

There has been a concern that some of the investment void might be “backfilled,” at least partly, by Asian firms such as those from China, Malaysia, Vietnam, and countries in Eastern Europe. However, as shown in **Table 4**, many such “backfilled” deals remain in preliminary stages or themselves stalled as investors reconsidered whether to risk U.S. sanctions. And most of the companies that might backfill abandoned projects are perceived as not being as technically capable as those that have withdrawn from Iran.

Much of the backfill that has proceeded has been conducted by domestic companies, particularly those controlled or linked to the Revolutionary Guard (IRGC). These firms have nowhere near the technical capabilities of most major international energy firms. And foreign firms are reluctant to partner with IRGC firms as international sanctions have increasingly targeted the IRGC. In July 2010, in an effort to attract some foreign investment, the IRGC’s main construction affiliate, Khatem ol-Anbiya, announced it had withdrawn from developing Phases 15 and 16 of South Pars—a project worth \$2 billion.⁷² Khatem ol-Anbiya took over that project in 2006 when Norway’s Kvaerner pulled out of it.

Table 4. Post-1999 Major Investments/Major Development Projects in Iran’s Energy Sector

Date	Field/Project	Company(ies)/Status (If Known)	Value	Output/Goal
Feb. 1999	Doroud (oil) (Energy Information Agency, Department of Energy, August 2006.) Total and ENI exempted from sanctions on September 30 because of pledge to exit Iran market	Total (France)/ENI (Italy)	\$1 billion	205,000 bpd

Sources: As noted in table, as well as CRS conversations with officials of the State Department Bureau of Economics, and officials of embassies of the parent government of some of the listed companies (2005-2009). Some information comes from various GAO reports, the latest of which was updated on December 7, 2012, in GAO-13-173R. "Iran Energy Sector"

Note: CRS has neither the mandate, the authority, nor the means to determine which of these projects, if any, might constitute a violation of the Iran Sanctions Act. CRS has no way to confirm the precise status of any of the announced investments, and some investments may have been resold to other firms or terms altered since agreement. In virtually all cases, such investments and contracts represent private agreements between Iran and its instruments and the investing firms, and firms are not necessarily required to confirm or publicly release the terms of their arrangements with Iran. Reported \$20 million+ investments in oil and gas fields, refinery upgrades, and major project leadership are included in this table. Responsibility for a project to develop Iran's energy sector is part of ISA investment definition.

Effect on Gasoline Availability and Importation

In March 2010, well before the enactment of CISADA on July 1, 2010, several gas suppliers to Iran, anticipating this legislation, announced that they had stopped or would stop supplying gasoline to Iran.⁷³ Others have ceased since the enactment of CISADA. Some observers say that gasoline deliveries to Iran fell from about 120,000 barrels per day before CISADA to about 30,000 barrels per day immediately thereafter,⁷⁴ although importation recovered to about 80,000 barrels per day by September 2011 and has remained roughly around that level since. Some gasoline sellers who were already sanctioned for this activity (see above), as well as others, appear to be selling to Iran. There have been no significant gasoline shortages, either before or after CISADA was enacted.

The phaseout of gasoline subsidies discussed above has further reduced demand for gasoline. Iran has also increased domestic production by converting at least two petrochemical plants to gasoline production. Iran also says it has accelerated renovations and other improvements to existing gasoline refineries, allocating \$2.2 billion for that purpose. Building new refining capacity appears to be Iran's long term effort to reduce its vulnerability to gasoline supply reductions. Iran's deputy oil minister said in July 2010 Iran would try to invest \$46 billion over a multi-year period to upgrade its nine refineries and build seven new ones, a far larger amount than Iran had previously allocated for this purpose.

The main suppliers to Iran prior to the CISADA sanctions, according to the GAO, are listed below, and most have stopped such sales, although some reports say that partners or affiliates of these firms may still sell to Iran in cases where the corporate headquarters have announced a halt.

⁷³ Information in this section derived from, Blas, Javier. "Traders Cut Iran Petrol Line." Financial Times, March 8, 2010.

⁷⁴ Information provided at Foundation for Defense of Democracies conference on Iran. December 9, 2010.

As noted in a *New York Times* report of March 7, 2010,⁷⁵ and a Government Accountability Office study released September 3, 2010,⁷⁶ some firms that have supplied Iran have received U.S. credit guarantees or contracts.

Table 5. Firms That Sold or Are Selling Gasoline to Iran

Vitol of Switzerland (notified GAO it stopped selling to Iran in early 2010)

Trafigura of Switzerland (notified GAO it stopped selling to Iran in November 2009)

Glencore of Switzerland (notified GAO it stopped selling in September 2009)

Total of France (notified GAO it stopped sales to Iran in May 2010)

Reliance Industries of India (notified GAO it stopped sales to Iran in May 2009)

Petronas of Malaysia (said on April 15, 2010, it had stopped sales to Iran)⁷⁷

Lukoil of Russia (reported to have ended sales to Iran in April 2010,⁷⁸ although some reports continue that Lukoil affiliates are supplying Iran)

Royal Dutch Shell of the Netherlands (notified GAO it stopped sales in October 2009)

Kuwait's Independent Petroleum Group (told U.S. officials it stopped selling gasoline to Iran as of September 2010)⁷⁹

Tupras of Turkey (stopped selling to Iran as of May 2011, according to the State Department)

British Petroleum of United Kingdom, Shell, Q8, Total, and OMV are no longer selling aviation fuel to Iran Air, according to U.S. State Department officials on May 24, 2011

A UAE firm, Golden Crown Petroleum FZE, told the author in April 2011 that, as of June 29, 2010, it no longer leases vessels for the purpose of shipping petroleum products from or through Iran

Munich Re, Allianz, Hannover Re (Germany) were providing insurance and re-insurance for gasoline shipments to Iran. However, they reportedly have exited the market for insuring gasoline shipments for Iran⁸⁰

Lloyd's (Britain). The major insurer had been the main company insuring Iranian gas (and other) shipping, but reportedly ended that business in July 2010. According to the State Department, key shipping associations have created clauses in their contracts that enable ship owners to refuse to deliver gasoline to Iran.

According to the State Department on May 24, 2011, Linde of Germany has said it had stopped supplying gas liquefaction technology to Iran, contributing to Iran's decision to suspend its LNG program.

Some of the firms sanctioned by the Administration on May 24, 2011 (discussed above), may still be providing service to Iran, including: PCCI (Jersey/Iran); Associated Shipbroking (Monaco); and Petroleos de Venezuela (Venezuela). Tanker Pacific representatives told the author in January 2013 that the firm had stopped dealing with Iran in April 2010 but may have been deceived by IRISL into a transaction with Iran after that time.

Zhuhai Zhenrong, Unipet, and China Oil of China. Zhuhai Zhenrong may still be selling gasoline to Iran despite being sanctioned, according to the GAO report of December 7, 2012. (GAO-13-173R Iran Energy Sector/

Emirates National Oil Company of UAE has been reported by GAO to still be selling to Iran. Three other UAE energy traders, FAL, Royal Oyster Group, and Speedy Ship (UAE/Iran) may still be selling even though they were sanctioned as discussed above.

Hin Leong Trading of Singapore may still be selling gasoline to Iran, as might Kuo Oil of Singapore even though it was sanctioned for doing so on January 12, 2012.

Some refiners in Bahrain reportedly may still be selling gasoline to Iran.

Source: CRS conversations with various firms, GAO reports, various press reports.

Humanitarian Effects/Air Safety

The effects of sanctions on the population's living standards was discussed above. Some Iranian pilots have begun to complain publicly and stridently that U.S. sanctions are causing Iran's passenger airline fleet to deteriorate to the point of jeopardizing safety. Since the U.S. trade ban was imposed in 1995, 1,700 passengers and crew of Iranian aircraft have been killed in air accidents, although it is not clear how many of the crashes, if any, were due specifically to the difficulty in providing U.S. spare parts to Iran's fleet.⁸¹ Some reports in early January 2013 indicate that Iran's domestic airlines were compelled to cancel flights because fuel suppliers began demanding cash rather than credit—although this development is not necessarily a threat to air safety. Other reports say that pollution in Tehran and other big cities has worsened because Iran is making gasoline itself with methods that cause more impurities than imported gasoline.

Press reports have mounted since mid-2012 that sanctions are hurting the population's ability to obtain Western-made medicines, such as expensive chemo-therapy medicines, and other critical goods. Some of the scarcity is caused by banks' refusal to finance such sales, even though doing so is technically allowed under all applicable sanctions. Some believe that a proliferation of press reports about such deprivations is changing the focus about Iran sanctions from Iran's non-compliance to the suffering of the Iranian public, and thereby causing growing opposition in Europe and elsewhere to increasing sanctions on Iran. Iran's only female minister, Minister of Health Marzieh Vahid Dastjerdi, was dismissed in December 2012 for openly criticizing the government for failing to provide her ministry with sufficient hard currency to buy needed medicines abroad.

Some observers say the Iranian government is exaggerating reports of medicine shortages to generate opposition to the sanctions. Other accounts say that Iranians, particularly those with connections to the government, are taking advantage of medicine shortages by cornering the market for importing key medicines. Some human rights and other groups are attempting to formulate potential solutions that would ease the medicine import situation.

Possible Additional Sanctions

Even though international sanctions are now comprehensive, some experts believe that additional pressure is needed to convince Iranian leaders that they must negotiate curbs on Iran's nuclear enrichment program. The Iran sanctions legislation and executive orders during the 112th Congress were discussed above.

On February 27, 2013, H.R. 850, was introduced by the Chairman and Ranking Member of the House Foreign Affairs Committee. The major provision is an authorization, but not a mandate, for the President to sanction any foreign person that has conducted a financial transaction with Iran's

⁸¹ Thomas Erdbink. "Iran's Aging Airliner Fleet Seen As Faltering Under U.S. Sanctions." July 14, 2012.

Central Bank or other sanctioned Iranian banks for trade with Iran in any goods (with the exception of oil or petroleum products, trade in which is addressed by other U.S. sanctions, as discussed above). The bill contains a requirement for the Administration to determine whether the Revolutionary Guard should be named a Foreign Terrorist Organization, and a “sense of Congress” that the Administration restrict Iran’s ability to use the euro currency, including through payment systems of the European Central Bank. The bill contained a Chairman’s amendment that would sanction foreign banks that help Iran exchange its foreign currency abroad—a provision virtually identical to S. 892 (introduced in the Senate on May 8, 2013)—was ordered to be reported by the Committee on May 22, 2013.

Another bill, H.R. 893, the Iran, North Korea, and Syria Non-Proliferation Act, has been introduced in the 113th Congress; it is primarily an update of an earlier law, discussed above, of virtually the same name. It contains a new provision that would mandate barring ships from porting in the United States if they had ported in Iran recently. During testimony before the Senate Foreign Relations Committee on April 18, 2013, Secretary of State John Kerry appealed for maximum flexibility from Congress to allow the Administration to pursue a nuclear deal with Iran—a statement that appeared to signal opposition to new Iran sanctions legislation.

Other Possible U.S. and International Sanctions

There are a number of other possible sanctions that might possibly receive consideration—either in a global or multilateral framework—or by the 113th Congress.

- *Sanctioning All Trade with Iran.* Some organizations, such as United Against Nuclear Iran, advocate sanctions against virtually all trade with Iran, with exceptions for food and medical products. The concept of a global trade ban on Iran has virtually no support in the United Nations Security Council, and U.S. allies strongly oppose U.S. measures that would compel allied firms to end commerce with Iran in purely civilian, non-strategic goods.
- *Comprehensive Ban on Energy Transactions with Iran.* Many experts believe that a highly effective sanction would be a U.N.-mandated, worldwide embargo on the purchase of any Iranian crude oil. There are no indications that such a concept has enough support in the U.N. Security Council to achieve adoption. U.S. laws and Executive Orders discussed above come close to constituting a U.S. unilateral move to compel a ban on Iranian oil buys, but they allow exceptions, as noted. Some advocate a U.N. Security Council ban on all investment in and equipment sales to Iran’s energy sector so that countries such as China would be compelled to end all dealings with that Iranian sector. During the 1990s, U.N. sanctions against Libya for the Pan Am 103 bombing banned the sale of energy equipment to Libya.
- *Iran Oil Free Zone.* Prior to the EU oil embargo on Iran, there was discussion of forcing a similar result by closing the loophole in the U.S. trade ban under which Iranian crude oil, when mixed with other countries’ oils at foreign refineries in Europe and elsewhere, can be imported as refined product. Some argue this concept has been mooted by the EU oil embargo, while others say the step still has value in making sure the EU oil embargo on Iran is not lifted or modified.
- *Mandating Reductions in Diplomatic Exchanges with Iran or Prohibiting Travel by Iranian Officials.* Some have suggested that the United States organize a

worldwide ban on travel by senior Iranian civilian officials, a pullout of all diplomatic missions in Tehran, and expulsion of Iranian diplomats worldwide. The EU came one close to adopting this option after the November 29, 2011 attack on the British Embassy in Tehran. Canada closed its embassy in Tehran in September 2012.

- *Barring Iran from International Sporting Events.* A further option is to limit sports or cultural exchanges with Iran, such as Iran's participation in the World Cup soccer tournament. However, many experts oppose using sporting events to accomplish political goals.
- *Sanctioning Iranian Profiteers and Corruption.* Some experts believe that, despite the provision of P.L. 112-239 discussed earlier, the United States and international community has not effectively targeted for sanctions Iranians who are exercising special rights, monopolies, or political contacts for personal gain, and depriving average Iranians of economic opportunity and of goods at reasonable prices. Others believe that human rights sanctions should be extended to Iranian officials who are responsible for depriving Iranian women and other groups of internationally-accepted rights.
- *Banning Passenger Flights to and from Iran.* Bans on flights to and from Libya were imposed on that country in response to the finding that its agents were responsible for the December 21, 1988, bombing of Pan Am 103 (now lifted). There are no indications that a passenger aircraft flight ban is under consideration among the P5+1. A variation of this idea could be the imposition of sanctions against airlines that are in joint ventures or codeshare arrangements with Iranian airlines.
- *Limiting Lending to Iran by International Financial Institutions.* Resolution 1747 calls for restraint on but does not outright ban international lending to Iran. An option is to make a ban on such lending mandatory. Some U.S. groups have called for the International Monetary Fund (IMF) to withdraw all its holdings in Iran's Central Bank and suspend Iran's membership in the body.
- *Banning Trade Financing or Official Insurance for Trade Financing.* Another option is to mandate a worldwide ban on official trade credit guarantees. This was not mandated by Resolution 1929, but several countries imposed this sanction subsequently. A ban on investment in Iranian bonds reportedly was considered but deleted to attract China and Russia's support.
- *Restricting Operations of and Insurance for Iranian Shipping.* One option, reportedly long under consideration, has been a worldwide ban on provision of insurance or reinsurance for any shipping to or from Iran. A call for restraint is in Resolution 1929, but is not mandatory. As of July 1, 2012, the EU has banned such insurance, and many of the world's major insurers are in Europe.

Sanctions Easing/Incentives

Some believe that the United States and its international partners need to prepare for possibly easing sanctions as part of a nuclear agreement with Iran. During the rounds of talks with Iran in 2012 the P5+1 have offered, in exchange for proposed curbs on Iranian uranium enrichment, relatively modest steps, well short of Iranian demands to lift the EU oil embargo. Many assert that

there will be no agreement with Iran unless that demand is met. Some observers believe Congress, in legislation, should spell out specific sanctions laws that would be altered if Iran were to meet international nuclear demands. Other observers believe that the international community should offer incentives—such as promises of aid, investment, trade preferences, and other benefits—if Iran were to completely abandon uranium enrichment in Iran or were there to be a new regime formed in Iran. Still others believe that the United States should take steps to identify sources of funds for humanitarian shipments to Iran of needed medicines that reportedly are in short supply.

Table 6. Entities Sanctioned Under U.N. Resolutions and U.S. Laws and Executive Orders

(Persons listed are identified by the positions they held when designated; some have since changed.)

Entities Named for Sanctions Under Resolution 1737

Atomic Energy Organization of Iran (AEIO) Mesbah Energy Company (Arak supplier); Kalaye Electric (Natanz supplier); Pars Trash Company (centrifuge program); Farayand Technique (centrifuge program); Defense Industries Organization (DIO); 7th of Tir (DIO subordinate); Shahid Hemmat Industrial Group (SHIG)—missile program; Shahid Bagheri Industrial Group (SBIG)—missile program; Fajr Industrial Group (missile program); Mohammad Qanadi, AEIO Vice President; Behman Asgarpour (Arak manager); Ehsan Monajemi (Natanz construction manager); Jafar Mohammadi (Adviser to AEIO); Gen. Hosein Salimi (Commander, IRGC Air Force); Dawood Agha Jani (Natanz official); Ali Hajinia Leilabadi (director of Mesbah Energy); Lt. Gen. Mohammad Mehdi Nejad Nouri (Malak Ashtar University of Defence Technology rector); Bahmanyar Morteza Bahmanyar (AIO official); Reza Gholi Esmaeli (AIO official); Ahmad Vahid Dastjerdi (head of Aerospace Industries Org., AIO); Maj. Gen. Yahya Rahim Safavi (Commander in Chief, IRGC)

Entities/Persons Added by Resolution 1747

Ammunition and Metallurgy Industries Group (controls 7th of Tir); Parchin Chemical Industries (branch of DIO); Karaj Nuclear Research Center; Novin Energy Company; Cruise Missile Industry Group; Sanam Industrial Group (subordinate to AIO); Ya Mahdi Industries Group; Kavoshyar Company (subsidiary of AEIO); Sho'a Aviation (produces IRGC light aircraft for asymmetric warfare); Bank Sepah (funds AIO and subordinate entities); Esfahan Nuclear Fuel Research and Production Center and Esfahan Nuclear Technology Center; Qods Aeronautics Industries (produces UAV's, para-gliders for IRGC asymmetric warfare); Pars Aviation Services Company (maintains IRGC Air Force equipment); Gen. Mohammad Baqr Zolqadr (IRGC officer serving as deputy Interior Minister; Brig. Gen. Qasem Soleimani (Qods Force commander); Fereidoun Abbasi-Davani (senior defense scientist); Mohasen Fakrizadeh-Mahabai (defense scientist); Seyed Jaber Safdari (Natanz manager); Mohsen Hojati (head of Fajr Industrial Group); Ahmad Derakshandeh (head of Bank Sepah); Brig. Gen. Mohammad Reza Zahedi (IRGC ground forces commander); Amir Rahimi (head of Esfahan nuclear facilities); Mehrdada Akhlaghi Ketabachi (head of SBIG); Naser Maleki (head of SHIG); Brig. Gen. Morteza Reza'i (Deputy commander-in-chief, IRGC); Vice Admiral Ali Akbar Ahmadiyan (chief of IRGC Joint Staff); Brig. Gen. Mohammad Hejazi (Basij commander)

Entities Added by Resolution 1803

Thirteen Iranians named in Annex I to Resolution 1803; all reputedly involved in various aspects of nuclear program. Bans travel for five named Iranians.

Electro Sanam Co.; Abzar Boresh Kaveh Co. (centrifuge production); Barzaganin Tejaral Tavanmad Saccal; Jabber Ibn Hayan; Khorasan Metallurgy Industries; Niru Battery Manufacturing Co. (Makes batteries for Iranian military and missile systems); Ettihad Technical Group (AIO front co.); Industrial Factories of Precision; Joza Industrial Co.; Pshgam (Pioneer) Energy Industries; Tamas Co. (involved in uranium enrichment); Safety Equipment Procurement (AIO front, involved in missiles)

Entities Added by Resolution 1929

Over 40 entities added; makes mandatory a previously nonbinding travel ban on most named Iranians of previous resolutions. Adds one individual banned for travel—AEIO head Javad Rahiqi

Amin Industrial Complex; Armament Industries Group; Defense Technology and Science Research Center (owned or controlled by Ministry of Defense); Doostan International Company; Farasakht Industries; First East Export Bank, PLC (only bank added by Resolution 1929); Kaveh Cutting Tools Company; M. Babaie Industries; Malek Ashtar University (subordinate of Defense Technology and Science Research Center, above); Ministry of Defense Logistics Export (sells

Iranian made arms to customers worldwide); Mizan Machinery Manufacturing; Modern Industries Technique Company; Nuclear Research Center for Agriculture and Medicine (research component of the AEIO); Pejman Industrial Services Corp.; Sabalan Company; Sahand Aluminum Parts Industrial Company; Shahid Karrazi Industries; Shahid Sattari Industries; Shahid Sayyade Shirazi Industries (acts on behalf of the DIO); Special Industries Group (another subordinate of DIO); Tiz Pars (cover name for SHIG); Yazd Metallurgy Industries

The following Revolutionary Guard affiliated firms (several are subsidiaries of Khatam ol-Anbiya, the main Guard construction affiliate): Fater Institute; Garaghe Sazendegi Ghaem; Gorb Karbala; Gorb Nooh ; Hara Company; Imensazan Consultant Engineers Institute; Khatam ol-Anbiya; Makin; Omran Sahel; Oriental Oil Kish; Rah Sahel; Rahab Engineering Institute; Sahel Consultant Engineers; Sepanir; Sepasad Engineering Company

The following entities owned or controlled by Islamic Republic of Iran Shipping Lines (IRISL): Irano Hind Shipping Company; IRISL Benelux; and South Shipping Line Iran

**Entities Designated Under U.S. Executive Order 13382
(many designations coincident with designations under U.N. resolutions)**

Entity	Date Named
Shahid Hemmat Industrial Group (Iran)	June 2005, September 2007
Shahid Bakeri Industrial Group (Iran)	June 2005, February 2009
Atomic Energy Organization of Iran	June 2005
Novin Energy Company (Iran) and Mesbah Energy Company (Iran)	January 2006
Four Chinese entities: Beijing Alite Technologies, LIMMT Economic and Trading Company, China Great Wall Industry Corp, and China National Precision Machinery Import/Export Corp.	June 2006
Sanam Industrial Group (Iran) and Ya Mahdi Industries Group (Iran)	July 2006
Bank Sepah (Iran)	January 2007
Defense Industries Organization (Iran)	March 2007
June 2007	
Pars Trash (Iran, nuclear program); Farayand Technique (Iran, nuclear program); Fajr Industries Group (Iran, missile program); Mizan Machine Manufacturing Group (Iran, missile prog.)	
Aerospace Industries Organization (AIO) (Iran)	September 2007
Korea Mining and Development Corp. (N. Korea)	September 2007

October 21, 2007

Islamic Revolutionary Guard Corps (IRGC)

Ministry of Defense and Armed Forces Logistics

Bank Melli (Iran's largest bank, widely used by Guard); Bank Melli Iran Zao (Moscow); Melli Bank PC (U.K.)

Bank Kargoshaee

Arian Bank (joint venture between Melli and Bank Saderat). Based in Afghanistan

Bank Mellat (provides banking services to Iran's nuclear sector); Mellat Bank SB CJSC (Armenia). Reportedly has \$1.4 billion in assets in UAE

Persia International Bank PLC (U.K.)

Khatam ol Anbiya Gharargah Sazandegi Nooh (main IRGC construction and contracting arm, with \$7 billion in oil, gas deals)

Oriental Oil Kish (Iranian oil exploration firm)

Ghorb Karbala; Ghorb Nooh (synonymous with Khatam ol Anbiya)

Sepasad Engineering Company (Guard construction affiliate)

Omran Sahel (Guard construction affiliate)

Sahel Consultant Engineering (Guard construction affiliate)

Hara Company

Gharargahe Sazandegi Ghaem

Bahmanyar Morteza Bahmanyar (AIO, Iran missile official, see above under Resolution 1737)

Ahmad Vahid Dastjerdi (AIO head, Iran missile program)

Reza Gholi Esmaeli (AIO, see under Resolution 1737)

Morteza Reza'i (deputy commander, IRGC) See also Resolution 1747

Mohammad Hejazi (Basij commander). Also, Resolution 1747

Ali Akbar Ahmadian (Chief of IRGC Joint Staff). Resolution 1747

Hosein Salimi (IRGC Air Force commander). Resolution 1737

Qasem Soleimani (Qods Force commander). Resolution 1747

Future Bank (Bahrain-based but allegedly controlled by Bank Melli)

March 12, 2008

July 8, 2008

Yahya Rahim Safavi (former IRGC Commander in Chief); Mohsen Fakrizadeh-Mahabadi (senior Defense Ministry scientist); Dawood Agha-Jani (head of Natanz enrichment site); Mohsen Hojati (head of Fajr Industries, involved in missile program); Mehrdada Akhlaghi Ketabchi (heads Shahid Bakeri Industrial Group); Naser Maliki (heads Shahid Hemmat Industrial Group); Tamas Company (involved in uranium enrichment); Shahid Sattari Industries (makes equipment for Shahid Bakeri); 7th of Tir (involved in developing centrifuge technology); Ammunition and Metallurgy Industries Group (partner of 7th of Tir); Parchin Chemical Industries (deals in chemicals used in ballistic missile programs)

August 12, 2008

Karaj Nuclear Research Center; Esfahan Nuclear Fuel Research and Production Center (NFRPC) ; Jabber Ibn Hayyan (reports to Atomic Energy Org. of Iran, AEIO); Safety Equipment Procurement Company; Joza Industrial Company (front company for Shahid Hemmat Industrial Group, SHIG)

September 10, 2008

Islamic Republic of Iran Shipping Lines (IRISL) and 18 affiliates, including Val Fajr 8; Kazar; Irinvestship; Shipping Computer Services; Iran o Misr Shipping; Iran o Hind; IRISL Marine Services; Iriatal Shipping; South Shipping; IRISL Multimodal; Oasis; IRISL Europe; IRISL Benelux; IRISL China; Asia Marine Network; CISCO Shipping; and IRISL Malta

September 17, 2008

Firms affiliated to the Ministry of Defense, including Armament Industries Group; Farasakht Industries; Iran Aircraft Manufacturing Industrial Co.; Iran Communications Industries; Iran Electronics Industries; and Shiraz Electronics Industries

October 22, 2008

Export Development Bank of Iran (EDBI). Provides financial services to Iran's Ministry of Defense and Armed Forces Logistics

Banco Internacional de Desarrollo, C.A., Venezuelan-based Iranian bank, sanctioned as an affiliate of the Export Development Bank.

Assa Corporation (alleged front for Bank Melli involved in managing property in New York City on behalf of Iran) December 17, 2008

March 3, 2009

11 Entities Tied to Bank Melli: Bank Melli Iran Investment (BMIIC); Bank Melli Printing and Publishing; Melli Investment Holding; Mehr Cayman Ltd.; Cement Investment and Development; Mazandaran Cement Co.; Shomal Cement; Mazandaran Textile; Melli Agrochemical; First Persian Equity Fund; BMIIC Intel. General Trading

February 10, 2010:

IRGC General Rostam Qasemi, head of Khatem ol-Anbiya Construction Headquarters (main IRGC corporate arm) and several entities linked to Khatem ol-Anbiya, including: Fater Engineering Institute, Imensazen Consultant Engineers Institute, Makin Institute, and Rahab Institute

June 16, 2010

- Post Bank of Iran
- IRGC Air Force
- IRGC Missile Command
- Rah Sahel and Sepanir Oil and Gas Engineering (for ties to Khatem ol-Anbiya IRGC construction affiliate)
- Mohammad Ali Jafari—IRGC Commander-in-Chief since September 2007
- Mohammad Reza Naqdi—Head of the IRGC's Basij militia force that suppresses dissent (since October 2009)
- Ahmad Vahedi—Defense Minister
- Javedan Mehr Toos, Javad Karimi Sabet (procurement brokers or atomic energy managers)
- Naval Defense Missile Industry Group (controlled by the Aircraft Industries Org that manages Iran's missile programs)
- Five front companies for IRISL: Hafiz Darya Shipping Co.; Soroush Sarzamin Asatir Ship Management Co.; Safiran Payam Darya; and Hong Kong-based Seibow Limited and Seibow Logistics.

Also identified on June 16 were 27 vessels linked to IRISL and 71 new names of already designated IRISL ships.

Several Iranian entities were also designated as owned or controlled by Iran for purposes of the ban on U.S. trade with Iran.

November 30, 2010

- Pearl Energy Company (formed by First East Export Bank, a subsidiary of Bank Mellat)
- Pearl Energy Services, SA
- Ali Afzali (high official of First East Export Bank)
- IRISL front companies: Ashtead Shipping, Byfleet Shipping, Cobham Shipping, Dorking Shipping, Effingham Shipping, Farnham Shipping, Gomshall Shipping, and Horsham Shipping (all located in the Isle of Man).
- IRISL and affiliate officials: Mohammad Hosein Dajmar, Gholamhossein Golpavar, Hassan Jalil Zadeh, and Mohammad Haji Pajand.

December 21, 2010

- Bonyad (foundation) Taavon Sepah, for providing services to the IRGC
- Ansar Bank (for providing financial services to the IRGC)
- Mehr Bank (same justification as above)
- Moallem Insurance Company (for providing marine insurance to IRISL, Islamic Republic of Iran Shipping Lines)
- Bank of Industry and Mine (BIM) May 17, 2011
- Tidewater Middle East Company June 23, 2011
- Iran Air
- Mehr-e Eqtesad Iranian Investment Co.

March 28, 2012

Iran Maritime Industrial Company SADRA (owned by IRGC engineering firm Khatem-ol-Anbiya, has offices in Venezuela)

Deep Offshore Technology PJS (subsidiary of the above)

Malship Shipping Agency and Modality Ltd (both Malta-based affiliates of IRISL)

Seyed Alaeddin Sadat Rasool (IRISL legal adviser)

Ali Ezati (IRISL strategic planning and public affairs manager)

July 12, 2012

- Electronic Components Industries Co. (ECI) and Information Systems Iran (ISIRAN)
- Advanced Information and Communication Technology Center (AICTC) and Hamid Reza Rabiee (software engineer for AICTC)
- Digital Media Lab (DML) and Value Laboratory (owned or controlled by Rabiee or AICTC)
- Ministry of Defense Logistics Export (MODLEX)

Daniel Frosh (Austria) and International General Resourcing FZE—person and his UAE-based firm allegedly supply Iran's missile industry.

November 8, 2012

- National Iranian Oil Company
- Tehran Gostaresh, company owned by Bonyad Taavon Sepah
- Imam Hossein University, owned by IRGC
- Baghyatollah Medical Sciences University, owned by IRGC or providing services to it.

December 13, 2012

Atomic Energy Organization of Iran (AEOI) chief Fereidoun Abbasi Davain
